Functional and Ecological Xylem Anatomy Uwe Hacke, 2015-04-20 The book will describe the xylem structure of different plant groups and will put the findings in a physiological and ecological context For instance when differences in vessel diameter are featured then there will be an explanation why this matters for water transport efficiency and safety from cavitation The focus is on the hydraulic function of xylem although mechanical support and storage will also be covered Featured plant groups include ferns which only have primary xylem conifers tracheid based xylem lianas extremely wide and long vessels drought adapted shrubs as well as the model systems poplar and grapevine The book chapters will draw on the expertise and cutting edge research of a diversified group of internationally known researchers working in different anatomical and physiological sub disciplines Over the last two decades much progress has been made in understanding how xylem structure relates to plant function Implications for other timely topics such as drought induced forest dieback or the regulation of plant biomass production will be discussed

Systematics and Evolution of the Ranunculiflorae Uwe Jensen, Joachim W. Kadereit, 2012-12-06 The volume presents current ideas about the systematics and evolution of the Ranunculiflorae and most of its constituent families A strong effort has been made to integrate DNA and morphological anatomical etc evidence and new ideas about the origin and phylogeny of the entire group as well as the Berberidaceae Lardizabalaceae Ranunculaceae and Papaveraceae are arrived at

The Evolution of Plant Physiology Alan R. Hemsley, Imogen Poole, 2004-02-05 Coupled with biomechanical data organic geochemistry and cladistic analyses utilizing abundant genetic data scientific studies are revealing new facets of how plants have evolved over time This collection of papers examines these early stages of plant physiology evolution by describing the initial physiological adaptations necessary for survival as upright structures in a dry terrestrial environment The Evolution of Plant Physiology also encompasses physiology in its broadest sense to include biochemistry histology mechanics development growth reproduction and with an emphasis on the interplay between physiology development and plant evolution Contributions from leading neo and palaeo botanists from the Linnean Society Focus on how evolution shaped photosynthesis respiration reproduction and metabolism Coverage of the effects of specific evolutionary forces variations in water and nutrient availability grazing pressure and other environmental variables

Climate Change, Ecology and Systematics Trevor R. Hodgkinson, Michael B. Jones, Stephen Waldren, John A. N. Parnell, 2011-04-28 Climate change has shaped life in the past and will continue to do so in the future

Understanding the interactions between climate and biodiversity is a complex challenge to science. With contributions from 60 key researchers, this book examines the ongoing impact of climate change on the ecology and diversity of life on earth. It discusses the latest research within the fields of ecology and systematics, highlighting the increasing integration of their approaches and methods. Topics covered include the influence of climate change on evolutionary and ecological processes such as adaptation, migration, speciation, and extinction, and the role of these processes in determining the diversity and biogeographic distribution of species and their populations. This book ultimately illustrates the necessity for global conservation actions to mitigate the effects of climate change in a world that is already undergoing a biodiversity crisis of unprecedented scale.

Sanchez-Azofeifa, Jennifer S. Powers, Geraldo W. Fernandes, Mauricio Quesada, 2013-08-29 Under threat from natural and human disturbance, tropical dry forests are the most endangered ecosystem in the tropics yet they rarely receive the scientific or conservation attention they deserve. In a comprehensive overview, *Tropical Dry Forests in the Americas: Ecology, Conservation, and Management* examines new approaches for data sampling and **Sieve Elements** H.-D. Behnke, R.D.

Sjölund, 2012-12-06 This detailed overview of the structure of the sieve elements of the major plant groups from algae to flowering plants includes extant and extinct groups, revealing both common and divergent solutions to the problem of long distance assimilate transport. New Perspectives in Wood Anatomy P. Baas, 2013-03-09 On the occasion of the 50th

Anniversary of the International Association of Wood Anatomists, several symposia were held during the 13th International Botanical Congress in Sydney, August 1981. Extended versions of most of the invited papers presented there, and some additional papers on aspects which could not be included in the congress program, constitute the contents of this book, which intentionally received the pretentious title *New Perspectives in Wood Anatomy*. To some readers, it may seem a paradox that under this heading, papers on a diversity of partly traditional wood anatomical subjects are assembled, even including two with a historical emphasis. However, a study of the history of wood anatomy and of how students of that discipline joined forces in an international association, brings to light many facts and views which deserve the attention of present-day and future wood scientists as a potential source of inspiration for their research and organisational work. Woody Plant

Communities T.T. Kozłowski, 2012-12-02 *Water Deficits and Plant Growth* Volume VI *Woody Plant Communities* focuses on the water relations of woody plants in a community context. Organized into eight chapters, this book begins with a quantitative overview of sources of water available to woody plants. Separate chapters follow that discuss the water relations of coniferous, temperate hardwood, and tropical and subtropical forests and woodlands, apple and citrus orchards, closely related woody plants, and tea plantations. For each of these plant communities, emphasis is placed on hydrological cycles, water use, and transpiration, absorption of water, and effects of environmental factors on soil and plant water balance. The

effects of water deficits on physiological processes vegetative and reproductive growth yield of harvested products drought resistance and cultural practices affecting plant water balance and yield are also emphasized in this book This volume will be useful to both researchers and those involved in the practice of growing woody plants for wood and fruit crops and for esthetic values

Terrestrial Ecosystems Through Time Anna K. Behrensmeyer, 1992-08-15 Breathtaking in scope this is the first survey of the entire ecological history of life on land from the earliest traces of terrestrial organisms over 400 million years ago to the beginning of human agriculture By providing myriad insights into the unique ecological information contained in the fossil record it establishes a new and ambitious basis for the study of evolutionary paleoecology of land ecosystems A joint undertaking of the Evolution of Terrestrial Ecosystems Consortium at the National Museum of Natural History Smithsonian Institution and twenty six additional researchers this book begins with four chapters that lay out the theoretical background and methodology of the science of evolutionary paleoecology Included are a comprehensive review of the taphonomy and paleoenvironmental settings of fossil deposits as well as guidelines for developing ecological characterizations of extinct organisms and the communities in which they lived The remaining three chapters treat the history of terrestrial ecosystems through geological time emphasizing how ecological interactions have changed the rate and tempo of ecosystem change the role of exogenous forcing factors in generating ecological change and the effect of ecological factors on the evolution of biological diversity The six principal authors of this volume are all associated with the Evolution of Terrestrial Ecosystems program at the National Museum of Natural History Smithsonian Institution

Jatropha, Challenges for a New Energy Crop Bir Bahadur, Mulpuri Sujatha, Nicolas Carels, 2012-12-14 *Jatropha curcas* or Physic Nut is a small tree bush plant that produces fruits under tropical climate The fruits contained seed that are 40% oil rich This oil is excellent for biodiesel The bush is a now new coming crop because it may cope with harsh environmental conditions such as semi aridity and poor land It is considered as one alternative for climate mitigation that does not compete with arable land normally dedicated to food crop and can be used to regain degraded land or fight desertification This bush has been considered seriously by the international community only recently 2006 2008 but worldwide scientists did an outstanding job to draw *Jatropha* out of its semi wild status and bring it on the industrial scene Problems remains but we have now a comprehensive picture of this crop and almost every technological challenged were addressed From now the job will have to concentrate on breeding in order to domesticate this species Therefore it is the right time to sum up worldwide contributions in a comprehensive book with a breeding looking to improve the chance of this plant to stabilize as a crop and to fulfil with the expectations that humans invested in it A book with this perspective will help international community to give a step on The book will be a broad and comprehensive look on *Jatropha* until the details
