Reflections on the Foundations of Mathematics Stefania Centrone, Deborah Kant, Deniz Sarikaya, 2019-11-11 This edited work presents contemporary mathematical practice in the foundational mathematical theories in particular set theory and the univalent foundations It shares the work of significant scholars across the disciplines of mathematics philosophy and computer science Readers will discover systematic thought on criteria for a suitable foundation in mathematics and philosophical reflections around the mathematical perspectives The volume is divided into three sections the first two of which focus on the two most prominent candidate theories for a foundation of mathematics Readers may trace current research in set theory which has widely been assumed to serve as a framework for foundational issues as well as new material elaborating on the univalent foundations considering an approach based on homotopy type theory HoTT The third

section then builds on this and is centred on philosophical questions connected to the foundations of mathematics Here the authors contribute to discussions on foundational criteria with more general thoughts on the foundations of mathematics which are not connected to particular theories This book shares the work of some of the most important scholars in the fields of set theory S Friedman non classical logic G Priest and the philosophy of mathematics P Maddy The reader will become aware of the advantages of each theory and objections to it as a foundation following the latest and best work across the disciplines and it is therefore a valuable read for anyone working on the foundations of mathematics or in the philosophy of mathematics
