Asteroid Answers to Ancient Calendar Mysteries Herbert B. Stollorz, 2008-07-03 Ancient calendars found around the world are designed to end one point in time They communicate an urgent warning to everyone alive today Complex bronze and gold clocks with multiple dials are found in museums around the world Why they have such advanced intricacy has stumped scientists for hundreds of years This book reveals why the ancients built so many pyramids observatories as well as those complex gold and bronze clocks with more than one dial It surprised me greatly to discover that their various complex designs in one way or another converge on 21 December 2012 It amazes me that ancient cultures separated by thousands of miles of geography and thousands of years in chronology agree so precisely in the cyclical nature of time history and prophecy which is history written in advance The most famous example is the Mayan Aztec calendar which ends its 25 626 year cycle on that momentous date Some researchers have also found 21 December 2012 in what is called the Bible Code

Using very different research methods I discovered it in the Bible's book of Revelation and Daniel's prophecies. It is one of the most important dates in the plan of God for all humanity.

Volume 2: Cases and Perspectives M. Kathleen Heid, Glendon W. Blume, 2008-07-01. Published in Co-operation with the National Council of Teachers of Mathematics. According to NCTM's Principles and Standards for School Mathematics, Technology is essential in teaching and learning of mathematics; it influences the mathematics that is taught and it enhances students' learning. How does research inform this clarion call for technology in mathematics teaching and learning? In response to the need to craft appropriate roles for technology in school mathematics, new technological approaches have been applied to the teaching and learning of mathematics and these approaches have been examined by researchers world-wide. The second volume has a dual focus: cases and perspectives. It features descriptive cases that provide accounts of the development of technology-intensive curriculum and tools. In these cases, the writers describe and analyze various roles that research played in their development work and ways in which research, curriculum development and tool development can inform each other. These thoughtful descriptions and analyses provide documentation of how this process can and does occur. The remaining chapters in the second volume address research-related issues and perspectives on the use of technology in the teaching and learning of mathematics. The lessons learned from the research presented in these volumes are lessons about teaching and learning that can be applied more broadly than solely in technological settings.

Cleophas,A.H. Zwinderman,Toine F. Cleophas,Eugene P. Cleophas,2008-12-16 In clinical medicine appropriate statistics has become indispensable to evaluate treatment effects Randomized controlled trials are currently the only trials that truly provide evidence based medicine Evidence based medicine has become crucial to optimal treatment of patients We can define randomized controlled trials by using Christopher J Bulpitt s definition a carefully and ethically designed experiment which includes the provision of adequate and appropriate controls by a process of randomization so that precisely

framed questions can be answered The answers given by randomized controlled trials constitute at present the way how patients should be clinically managed In the setup of such randomized trial one of the most important issues is the statistical basis The randomized trial will never work when the statistical grounds and analyses have not been clearly defined beforehand All endpoints should be clearly defined in order to perform appropriate power calculations Based on these power calculations the exact number of available patients can be calculated in order to have a sufficient quantity of individuals to have the predefined questions answered Therefore every clinical physician should be capable to understand the statistical basis of well performed clinical trials It is therefore a great pleasure that Drs T J Cleophas A H Zwinderman and T F Cleophas have published a book on statistical analysis of clinical trials The book entitled Statistics Applied to Clinical Trials is clearly written and makes complex issues in statistical analysis transparent New Syllabus Mathematics Workbook 4 Dr Joseph Yeo, Teh Keng Seng, Loh Cheng Yee, Ivy Chow, 2008-01-01 New Syllabus Mathematics Workbook Express is written in line with the new Singapore Cambridge GCE O Level Examination and the new initiatives of the Ministry of Education The workbook consists of exercises which prepare students for their examinations The more difficult questions are marked with an To encourage student centred learning the workbook includes non routine types of worksheets that are classified under the section Alternative Assessment These worksheets encourage students to learn independently through carefully guided steps and the use of IT Students are motivated to investigate mathematical concepts with various methods and think critically so that they will understand and appreciate the concepts better The teacher can gauge the students learning by assessing the work with the scoring rubric found at the end of the relevant worksheets The workbook is accompanied with a CD ROM that contains templates to be used with some worksheets It is hoped that with the use of various pedagogies different types of students will be inspired to achieve success in mathematics Black Holes, White Dwarfs, and Neutron Stars Stuart L.
