Circuit Schematics

Each schematic represents one circuit. A circuit's wires and components are arranged to show current flow, from power at the top of the page, to ground at the bottom.

Shared Circuits

Other circuits may share power or ground terminals or wiring with the circuit shown. A wire that connects one circuit to another, for example, is not shown and has an arrowhead at the end of it pointing in the direction of current flow. Next to the arrowhead is the name of the circuit or component which shares that wiring. To check shared wiring quickly, check the operation of a component it serves. If that component works, you know the shared wiring is OK.

Connectors

All in-line and junction connectors are numbered C725, C716, etc. Component connectors are not numbered but are identified either by the name of the component if the component only has one connector, or by a capital letter (A, B, C, etc.) if the component has more than one connector.

Below most in-line and junction connector numbers and component names are PHOTO and VIEW numbers. The PHOTO number refers to a photograph in section 201 of this book that shows the connector's location on the vehicle. The VIEW number refers to an illustration in section 202 of the book that shows the connector terminals, wire colors, connector cavity numbers, and other details.

The connector cavity numbering sequence begins at the top left corner of the connector as seen from either of the viewpoints shown on page 6. Except for the DLC (data line) connector, disregard any numbers molded into the connector housing.

Wires

Wires are identified by the abbreviated names of their colors; the second color is the color of the stripe, if present. Wires also are identified by their location in a connector. The number "1" next to the male and female wire terminals at C504, for example, means those terminals join in cavity 1 of connector C504.

Symbols

A complete description of schematic symbols begins on page 7.

How to Use this Manual

Power Distribution Schematics

Power Distribution schematics show how power is supplied from the positive battery terminal to various circuits in the vehicle. Refer to the Power Distribution section to get a more detailed understanding of how power is supplied to the circuit that you are working on.

Individual circuit schematics begin with a fuse. If a Power Distribution shows that an inoperative circuit and another circuit share a fuse, check a component in the other circuit. If it works, you know the fuse is good and power is available to the inoperative circuit.
