Ingredients for Aquaculture Feeds J.W. Hertrampf, F. Piedad-Pascual, 2012-12-06 Current growth in global aquaculture is paralleled by an equally significant increase in companies involved in aquafeed manufacture Latest information has identified over 1 200 such companies not including those organizations in production of a variety of other materials i e vitamins minerals and therapeutics all used in varying degrees in proper feed formulation Aquaculture industries raising particular economically valued species i e penaeid shrimps and salmonids are making major demands on feed ingredients while relatively new industries such as tilapia farming portend a significant acceleration in demand for properly formulated aquafeeds by the end of the present decade and into the next century As requirements for aquafeeds increases shortages are anticipated in various ingredients especially widely used proteinaceous resources such as fish meal A variety of other proteinaceous commodities are being considered as partial or complete replacement for fish meal especially use of plant protein sources such as soybean meal In the past five years vegetable protein meal production has increased 10% while fish meal production has dropped over 50% since 1989 largely attributed to overfishing and serious decline in wild stock Throughout fisheries processing industries traditional concepts as waste have given way to more prudent approaches emphasizing total by product recovery Feed costs are a major consideration in aquaculture where in some groups i e salmonids high protein containing feeds using quality fish meal can account for as much as 40 to 60% of production costs

Crustacean Farming John F. Wickins, Daniel O'C. Lee, 2008-04-15 *Crustacean Farming* Ranching and Culture Second edition John F Wickins and Daniel O C Lee The second edition of an extremely well received book *Crustacean Farming* deals with all cultivated crustaceans of commercial significance shrimp prawns crayfish lobsters crabs and spiny lobsters and examines the criteria by which both the feasibility and desirability of farming proposals are assessed The characteristics and production methods of farmed and candidate crustacean species are described in sufficient detail to enable areas of profitable involvement to be distinguished from other opportunities presenting only very high risks and possibilities for serious loss Coverage extends right from broodstock acquisition and management through to the operation of hatcheries nurseries and on growing units to key aspects of processing and marketing New to this second edition are ranching and re stocking operations together with the culture of ornamental shrimp and small crustaceans used as live food in fish and shellfish hatcheries The sections on crustacean diseases genetics and nutrition have been extended in the light of recent research advances Examples of investment and operating costs of the different culture options are compared and an analysis of current trends in world crustacean markets is presented to assist in economic and financial appraisal Special consideration is given to the place of crustacean farming within the economics of developing nations in relation to social and environmental impact in order to promote awareness of the wider implications of global developments The consequences of recent research and technical developments are considered together with concerns over genetic and animal welfare issues Specific areas where further advances in technology are needed to improve the reliability or productivity of farming systems are highlighted This important book is a vital tool and reference work for all those involved with crustacean farming worldwide

Shrimp acute hepatopancreatic necrosis disease strategy manual Food and Agriculture Organization of the United Nations ,2020-11-24 The contents of this *Shrimp acute hepatopancreatic necrosis disease strategy manual* provides information and guidance relevant to the development of policies to respond to outbreaks of acute hepatopancreatic necrosis disease AHPND in farmed marine shrimp The etiologic agents for AHPND are virulent strains of bacteria belonging to the genus *Vibrio* *parahaemolyticus* and related species which harbor specific toxin genes While these bacterial species are part of the normal microflora of the marine environment they may cause substantial mortalities in whiteleg shrimp *Penaeus vannamei* and giant tiger prawn *Penaeus monodon* cultured in countries in Asia and the Americas These strains of these *Vibrio* bacteria secrete a PirABvp binary toxin resulting in sloughing of tubule epithelial cells and dysfunctions of the hepatopancreas in the acute form mortality can reach 100 percent in affected ponds Chronic presentation of this disease

involves secondary bacterial infection of hepatopancreas and running mortality over the culture cycle Acute or chronic presentation would greatly depend on the culture conditions This disease can be considered a toxicosis rather than an infection Economic losses due to this disease have amounted to over USD 7 billion annually Further outbreaks of AHPND particularly in areas that are currently free of the disease would be expected to experience similar devastating effects on local shrimp producers and the surrounding communities and thus there is an urgent need to develop a contingency plan to control and eradicate this disease This manual includes information on 1 the nature of AHPND a brief review of current knowledge in disease etiology susceptible species and global distribution 2 diagnosis of disease a description of gross clinical signs and laboratory methods 3 prevention and treatment farm management the use and development of antibiotics bacteriophages probiotics disease tolerant shrimp shrimp immunity and vaccination 4 epidemiology AHPND s geographic distribution genotype persistence in the environment reservoir hosts modes of transmission risk factors and economic impacts 5 principles of control and eradication methods for containment mitigation and eradication of AHPND and trade and industry considerations and 6 policy development and implementation AHPND specific objectives options and strategies for eradication and control education capacity building funding and compensation

Manual of Diagnostic Tests for Aquatic Animals International Office of Epizootics, 2006 **Introductions and Movement of Two Penaeid Shrimp Species in Asia and the Pacific** Mathew Briggs, Food and Agriculture Organization of the United Nations, 2005-01-01 Both *Penaeus vannamei* and *P. stylirostris* are introduced species in Asia and the Pacific

They have now become important commercial shrimp species in many countries in Asia. The main reason behind the importation of *P. vannamei* to Asia has been the perceived poor performance, slow growth rate and disease susceptibility of the major indigenous cultured shrimp species *P. chinensis* in China and *P. monodon* virtually everywhere else. However, for many reasons, particularly with the evidence of the introduction of exotic viruses to the region, there has been caution on the part of many Asian governments for the introduction of *P. vannamei* and *P. stylirostris*. Nevertheless, this caution has not been demonstrated by the private sector, which has been bringing stocks of illegal and often disease-carrying *P. vannamei* into Asia from many locations as well as moving infected stocks within Asia. The commercial success of these introductions, despite disease problems, has allowed the development of substantial culture industries for these alien penaeids within Asia, particularly in China and Thailand. One effect of this is that it is rapidly becoming difficult to control the importation and development of this new industry. This report attempts to gather all of the currently available data on the extent of *P. vannamei* and *P. stylirostris* importation and culture in Asia, its potential problems and benefits, and in this way to serve as a source document from which to investigate further means by which control over this issue might be re-established. Recommendations aimed at controlling the importation, testing and culture of these species have been made for all levels and are included in this report.

Publisher's description: *Reproductive Biology of Crustaceans*, Elena Mente, 2008-01-04

Crustaceans adapt to a wide variety of habitats and ways of life. They have a complex physiological structure, particularly with regard to the processes of growth, molting, metabolic regulation and reproduction. Crustaceans are ideal as model organisms for the study of endocrine disruption and stress physiology in aquatic invertebrates. Sensitivity of Mangrove Ecosystem to Changing Climate, Abhijit Mitra, 2013-08-13

Mangroves are basically salt-tolerant forest ecosystems found mainly in tropical and subtropical intertidal regions. Till about 1960s, mangroves were largely viewed as economically unproductive areas and were therefore destroyed for reclaiming land for various economic and commercial activities. Gradually, with the passage of time, the economic and ecological benefits of mangroves have become visible, and their importance is now well appreciated. Today, mangroves are observed in about 30 countries in tropical and subtropical regions, covering an area of about 99,300 Sq Km. However, during the past 50 years, over 50% of the mangrove cover has been lost, mainly because of the increased pressure of human activities like shrimp farming and agriculture, forestry, salt extraction, urban development, tourist development and infrastructure. Also, dam on rivers, contamination of sea waters caused by heavy metals, oil spills, pesticides and other products, etc. have been found to be responsible for the decline of mangroves. Although the temperature effect on growth and species diversity is not known, sea level rise may pose a serious threat to these ecosystems. The present book addresses all these important issues in separate chapters with some interesting case studies whose data may serve as a pathfinder for future

researches in the sphere of the influence of climate change on mangrove ecosystem The role of mangroves in the sector of bioremediation is a unique feather in the crown of this coastal and brackishwater vegetation that may be taken up by the coastal industries in order to maintain the health of ambient environment This book seeks to discover and to assess the vulnerability of climate change on mangrove flora and fauna their role in carbon sequestration and some interesting case studies by some groups of dedicated researchers that may serve as the basis of future climate related policies
