*DNA Methods in Clinical Microbiology* P. Singleton, 2013-04-17

*DNA Methods in Clinical Microbiology* describes the novel DNA based technology now used in the diagnosis and management of infectious diseases. It is a concise yet readable overview written primarily for clinicians, clinical microbiologists, medical students and undergraduates in medical and veterinary microbiology. The book has two primary aims: First to explain the principles of these methods at the molecular level; Second to provide a clinical perspective by reporting results from actual DNA based investigations on a range of specimens. Those approaching DNA methods for the first time are assisted by a brief summary of the relevant features of nucleic acids. Chapter 2, this information is essential for an understanding of later chapters. Subsequent text covers detection, characterization and quantification of pathogens by a variety of methods e.g. target amplification, PCR, LCR, NASBA, TMA and SDA, signal amplification, bDNA and probe based techniques. The chapter on typing describes nearly twenty named molecular methods including spoligotyping and MLST. All chapters include an adequate range of current reference from which if required detailed protocols can be obtained. The diagrams are clear and readers are assisted by a detailed index.
