

FARMALL CUB

Magneto

Your tractor is equipped with a high-tension magneto which is designed and built in accordance with the latest ignition practices. A magneto of this type is used by International Harvester because our engineers have proved that it is superior from the standpoint of performance, long life, and trouble-free operation.

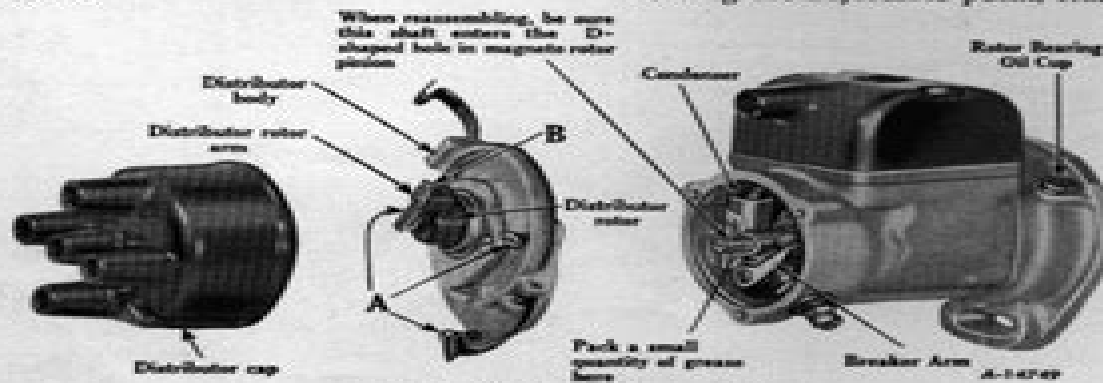

Lubrication

After every 500 hours of operation fill the rotor bearing oil cup (on mounting flange), *Illustr. 57*, once with the same oil as used in the crankcase.

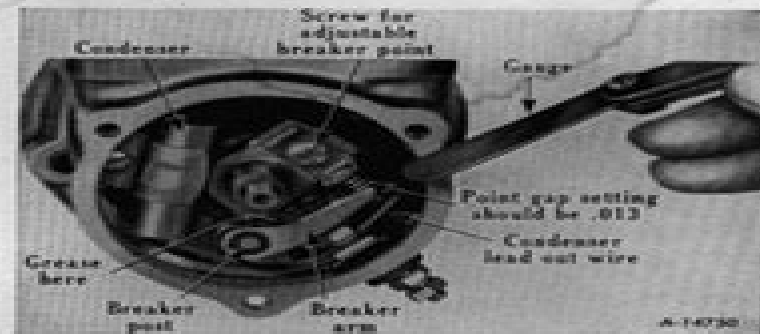

Greasing Breaker Mechanism and Checking Points

It is important that the breaker chamber be kept clean, as oil on the breaker points will cause rapid burning. Inspect the breaker chamber after every 250 hours of operation, to assure that it is clean. To reach the breaker mechanism, remove the distributor cap, and crank the engine slowly until the end "B" of the distributor rotor arm points toward the No. 1 terminal on distributor cap, and impulse coupling just trips. Take off the distributor body by removing the three screws "A," *Illustr. 54*. See that the points are in good condition and have the proper clearance. If the chamber is clean, no attention is necessary other than checking the clearance of the points; but if the chamber is dirty, all parts must be thoroughly cleaned.

Do not crank the engine while distributor body is removed or it might be necessary to retune the magneto to the engine.

Illustr. 54—Magneto Disassembled

Illustr. 53—Adjusting the Breaker Points.

Remove the breaker arm from the chamber, and clean all parts. Inspect the breaker points and, if necessary, dress them with a sharp, fine file. If the points are worn excessively, replace both points.

Fill the recess in the breaker post with grease and pack a small quantity of magneto grease in back of the breaker arm rubbing block (*Illustr. 53 and 54*). See your International Harvester dealer for the proper grease to use.

Replace the breaker arm and be sure the points line up when breaker arm is in place.

Check the gap between the breaker points, *Illustr. 53*, with the gauge furnished with the tractor. The point opening should be .013-inch when the rubbing block is on the high part of the cam. If gap is not correct, adjust it by loosening the screw holding the adjustable point, *Illustr. 53*, and moving
