**Symposium of Information and Internet Technology (SYMINTech 2018)** Mohd Azlishah Othman, Mohamad Zoinol Abidin Abd Aziz, Mohd Shakir Md Saat, Mohamad Harris Misran, 2019-05-15 This book gathers the proceedings of a symposium on the role of Internet technologies and how they can transform and improve people's lives. The Internet is essentially a massive database where all types of information can be shared and transmitted. This can be done passively in the form of non-interactive websites and blogs or it can be done actively in the form of file sharing and document upload and downloading. Thanks to these technologies, a wealth of information is now available to anyone who can access the Internet. Moreover, Internet technologies are constantly improving, growing faster, offering more diverse information and supporting processes that would have been impossible in the past. As a result, they have changed and will continue to change the way that the world does business and how people interact in their day-to-day lives. In conclusion, the symposium and these proceedings provide a valuable opportunity for leading researchers, engineers, and professionals around the globe to discuss the latest advances that are helping the world move forward. They also facilitate the exchange of new ideas in the fields of communication technology to create a dialogue between these groups concerning the latest innovations, trends, and concerns, practical challenges, and potential solutions in the field of Internet technologies.

**Biopsychosocial Perspectives and Practices for Addressing Communicable and Non-Communicable Diseases** Taukeni, Simon George, 2020-04-17 While there are a number of clinical practices for treating a variety of diseases, there is an urgent need to integrate bio-psychosocial perspectives and practices in order to promote comprehensive healthcare. Current research reports that diseases such as HIV, AIDS, malaria, diabetes, cardiovascular diseases, and heart diseases are a growing threat to the health and quality of life of individuals across the globe. Considering that nearly all these diseases are directly related to the lifestyle of an individual, prevention and intervention should be devised to address psychological, emotional, social, and spiritual factors. Biopsychosocial Perspectives and Practices for Addressing Communicable and Non-Communicable Diseases is a collection of theoretical research that promotes good health and quality of life through psychosocial interventions to address psychosocial problems facing individuals such as discrimination and stigma, stress, depression, alcohol and drug abuse, smoking, lack of physical activity, and many other socio-economic factors. While highlighting topics including mental health, traditional healthcare, and global health, this book is ideally designed for therapists, counselors, psychologists, medical professionals, hospital administrators, researchers, academicians, and students in fields that include public health, nursing, community-based healthcare, health psychology, HIV/AIDS education, human movement education, and sport psychology.

**Food data collection in Household Consumption and Expenditure Surveys. Guidelines for low and middle income countries**

Food and Agriculture Organization of the United Nations,The World Bank,2018-10-30 The measurement of food consumption

and expenditure is a fundamental component of any analysis of poverty and food security and hence the importance and timeliness of devoting attention to the topic cannot be overemphasized as the international development community confronts the challenges of monitoring progress in implementing the 2030 Agenda for Sustainable Development In 2014 the International Household Survey Network published a desk review of the reliability and relevance of survey questions as included in 100 household surveys from low and middle income countries The report was presented in March 2014 at the forty fifth session of the United Nations Statistical Commission UNSC in a seminar organized by the Inter Agency and Expert Group on Food Security Agricultural and Rural Statistics IAEG AG The assessment painted a bleak picture in terms of heterogeneity in survey design and overall relevance and reliability of the data being collected On the positive side it pointed to many areas in which even marginal changes to survey and questionnaire design could lead to a significant increase in reliability and consequently great improvements in measurement accuracy The report which sparked a lot of interest from development partners and UNSC member countries prompted IAEG AG to pursue this area of work with the ultimate objective of developing validating and promoting scalable standards for the measurement of food consumption in household surveys The work started with an expert workshop that took place in Rome in November 2014 Successive versions of the guidelines were drafted and discussed at various IAEG AG meetings and in another expert workshop organized in November 2016 in Rome The guidelines were put together by a joint FAO World Bank team with inputs and comments received from representatives of national statistical offices international organizations survey practitioners academics and experts in different disciplines statistics economics nutrition food security and analysis A list of the main contributors is included in the acknowledgment section In December 2017 a draft of the guidelines was circulated to 148 National Statistical Offices from low to high income countries for comments The document was revised following that consultation and submitted to UNSC which endorsed it at its forty ninth session in March 2018 under item 3 j of the agenda agricultural and rural statistics The version presented here reflects what was endorsed by the Commission edited for language The process received support from the Global Strategy for Agricultural and Rural Statistics The document is intended to be a reference document for National Statistical Offices survey practitioners and national and international agencies designing household surveys that involve the collection of food consumption and expenditure data

**New Challenges and Future Perspectives in Nutrition and Sustainable Diets in Africa** Hettie Carina Schönfeldt, Gloria Essilfie, Yunyun Gong, 2024-05-06 Africa is confronted with the triple burden of malnutrition it is also faced with the triple challenges of poverty inequality and unemployment In many African countries large proportions of the population rely on agriculture not only for their food but also for their livelihoods A transformed agricultural and food system is thus a necessary condition for addressing this double triple challenge Additionally post harvest and food waste and losses reduce the availability of sufficient quantities of safe edible and preferable foods At least one third of food produced at farm level is lost due to inappropriate storage

infrastructure and agro processing technologies in developing countries and one third of food purchased is wasted at household and retail level      **Understanding the demand for “protective foods” in East Africa: An economic analysis with policy recommendations** Headey, Derek D.,Ecker, Olivier,Comstock, Andrew R.,Ruel, Marie T.,2021-07-29

Suboptimal diets are a major risk factor for avoidable death and disease in low and middle income countries Evidence shows that some foods or food components e g processed red meat saturated fat salt sugar significantly elevate the risk of noncommunicable diseases and mortality while others protect health e g vegetables fruits pulses nuts seeds fish whole grains referred to in this document as protective foods We used household surveys to compare dietary patterns in Ethiopia Kenya Tanzania and Uganda to the EAT Lancet healthy reference diet and to quantify and explain consumption gaps for nutritious foods Compared to the EAT Lancet healthy reference diet consumption gaps for pulses and nuts seeds vegetables and fruits are large for both poor and rich consumers in rural and urban areas in the four countries studied while consumption gaps for meat fish and eggs and dairy foods are much larger for lower income groups Food expenditures of most households in these four countries are far too low to allow consumption of the healthy reference diet animal source foods and vegetables are the largest cost components of food expenditures although quantities consumed of both food groups are much lower than the EAT Lancet healthy reference diet Income elasticities of demand for pulses and nuts seeds and vegetables are often low or moderate suggesting weak consumer preference for these foods while income elasticities for fruits and animal source foods are relatively high Income growth alone will not solve dietary problems in East Africa in addition to supply side interventions to improve affordability special interventions are required to increase consumer demand for underappreciated protective nutritious foods such as pulses and nuts seeds and vegetables      Body Composition Assessment Techniques in Clinical and Epidemiological Settings: Development, Validation and Use in Dietary Programs, Physical Training and Sports Roberto
