American agriculture is changing and the science of statistical measurement is changing as well. As with every major governmental data collection with such far reaching and important uses it is critical to periodically ensure that the survey is grounded in relevant concepts applying the most up to date statistical methodology and invested with the necessary design estimation and analytical techniques to ensure a quality product. ARMS is a complex undertaking. From its start as a melding of data collected from the field, the farm and the household in a multiphase, multiframe and multiple mode survey design it has increased in complexity over the decade of its existence as more sophisticated demands for its outputs have been made. Today the survey faces difficult choices and challenges including a need for a thorough review of its methods, practices and procedures. Understanding American Agriculture Challenges for the Agricultural Resource Management Survey summarizes the recommendations of the committee who wrote the survey.
