Complex Numbers Walter Ledermann, 1976 **Complex Numbers and Their Applications** F. J. Budden, 1968
Complex numbers and their applications Francis James Budden, 1970 Complex Numbers Made Simple Verity Carr, 1996

Complex Numbers lie at the heart of most technical and scientific subjects. This book can be used to teach complex numbers as a course text, a revision or remedial guide, or as a self-teaching work. The author has designed the book to be a flexible learning tool suitable for A Level students as well as other students in higher and further education whose courses include a substantial maths component, e.g. BTEC or GNVQ science and engineering courses. Verity Carr has accumulated nearly thirty years of experience teaching mathematics at all levels and has a rare gift for making mathematics simple and enjoyable. At Brooklands College she has taken a leading role in the development of a highly successful Mathematics Workshop. This series of Made Simple Maths books widens her audience but continues to provide the kind of straightforward and logical approach she has developed over her years of teaching.

Complex Numbers from A to ...Z Titu Andreescu, Dorin Andrica, 2007-10-08

It is impossible to imagine modern mathematics without complex numbers. *Complex Numbers from A to Z* introduces the reader to this fascinating subject that from the time of L. Euler has become one of the most utilized ideas in mathematics. The exposition concentrates on key concepts and then elementary results concerning these numbers. The reader learns how complex numbers can be used to solve algebraic equations and to understand the geometric interpretation of complex numbers and the operations involving them. The theoretical parts of the book are augmented with rich exercises and problems at various levels of difficulty. A special feature of the book is the last chapter, a selection of outstanding Olympiad and other important mathematical contest problems solved by employing the methods already presented. The book reflects the unique experience of the authors. It distills a vast mathematical literature, most of which is unknown to the western public and captures the essence of an abundant problem culture. The target audience includes undergraduates, high school students and their teachers, mathematical contestants such as those training for Olympiads or the W. L. Putnam Mathematical Competition and their coaches, as well as anyone interested in essential mathematics.
