L. Barclay, Patrice Bouchard, 2023-08-15 A richly illustrated guide to the astonishing variety of beetles around the world Beetles make up about a quarter of known animal species and are arguably the most diverse group of organisms on Earth almost 400 000 species have been formally described so far and it is likely that this number merely scratches the surface In Beetles of the World Maxwell Barclay and Patrice Bouchard two of the world's foremost beetle experts celebrate these remarkable creatures in all their variety from their size and appearance to their ecological importance Providing concise accounts of all the major families and subfamilies of Coleoptera Beetles of the World explores beetle anatomy life cycle fossil history feeding habits role in the food web habitats relationship with humans and classification as well as the essential part that beetles play in the global ecosystem and the ways humans can help protect them Features 300 stunning color photographs Presents family profiles with a distribution map table of information and commentary Includes a comprehensive introduction that provides insight into the astonishing diversity of beetles and their histories **The Lives of Beetles**

Arthur V. Evans, 2023-01-17 A richly illustrated introduction to the incredible world of beetles With some 400 000 species beetles are among the largest and most successful groups of organisms on earth making up one fifth of all plant and animal species No other animals exhibit such a dazzling range of size form and color Mostly small sturdy and compact beetles are incredibly well equipped to find food reproduce and avoid predators Additionally their collective roles as herbivores hunters and recyclers are critical to the sustainability of terrestrial ecosystems In this lavishly illustrated book beetle expert and author Arthur Evans presents an inviting and comprehensive introduction to the fascinating lives of the world's beetles Universal in scope The Lives of Beetles is packed with the latest scientific findings presented in an accessible way Individual

chapters cover beetles structure and function evolution diversity classification and distribution communication reproduction and development feeding habits uses in medicine science and technology and study and conservation Each chapter concludes with nine stunningly illustrated profiles that highlight the lives of some of the world's most beautiful and interesting species The book also features an up to date family classification a glossary and suggestions for further reading We need beetles for the ecological services they provide the technological innovations they inspire and the scientific insights they reveal so it is essential that we all get to know beetles better and strive to conserve their habitats The Lives of Beetles is the perfect place to begin this journey of discovery and understanding

Aleocharine Rove Beetles of British Columbia: A Hotspot of Canadian Biodiversity (Coleoptera, Staphylinidae) Jan Klimaszewski, E. Richard Hoebeke, Benoit Godin, Anthony Davies, Kayla I. Perry, Caroline Bourdon, Neville Winchester, 2020-05-26 Aleocharine beetles are among the most poorly known and difficult to identify groups of Coleoptera worldwide This book presents the first comprehensive synopsis of aleocharine rove beetle species Coleoptera Staphylinidae from British Columbia Canada It is important to generate a structured inventory of species in hotspots of biodiversity like British Columbia to provide baseline biodiversity data for monitoring species responses related to climate change It is the first book to treat and illustrate every recorded and new species For every species color illustrations are provided including color habitus and genital diagnostic structures of both sexes Two hundred and twenty seven valid species including 14 new species 16 new generic records and 36 excluding new species new provincial and 6 state records in 79 genera and 14 tribes Tribes and subtribes are arranged in phylogenetic order as it is currently recognized and genera and subgenera are listed alphabetically within each tribe or subtribe Species are listed alphabetically or in species groups to better reflect their relationships Species distribution is listed by provinces and territories in Canada and states in the United States and the geographic origin of each species is categorized as native Holarctic adventive or undetermined either adventive or Holarctic Every species is presented with a morphological diagnosis including external and genital characters of both sexes Collection and habitat data are presented for each species including collecting period and collecting methods A list of all Canadian species with their currently known distribution in North America is presented at the end of the book

Biodiversity, Biosystematics, and Ecology of Canadian Coleoptera II Christopher G. Majka, J.

Klimaszewski, 2009-09-28 This volume includes thirteen research articles focused primarily on Canadian Coleoptera Several taxonomic and biodiversity studies examine groups within the Staphylinidae Cerambycidae Gyrinidae and Haliplidae describing new species presenting keys to identification mapping distributions and reporting new provincial and national records Other studies direct their attention to saproxylic beetles as indicators of forest disturbance and to the beetle fauna of Rhode Island and the larger zoogeographic utility of distributional checklists An introductory essay discusses a variety of challenges to biodiversity and biosystematics research worldwide The contents of present volume represent stepping stones of biodiversity research a discipline vital to the future of life on the planet The book is addressed to coleopterists taxonomists

ecologists biogeographers and conservationists Coleoptera Histeridae Yves Bousquet, Serge Laplante, National Research Council Canada, National Research Council Canada. Monograph Publishing Program, 2006 NRC Monograph Publishing Program T p verso **Biosystematics and Ecology of Canadian Staphylinidae (Coleoptera) II** Jan Klimaszewski, Robert Anderson, 2012-04-26 New taxonomic distribution and habitat data are presented for Canadian species of the family Staphylinidae Coleoptera Distributional records are presented mostly from New Brunswick Ontario and Yukon Territory For New Brunswick 186 new provincial records 11 new records for Canada and 10 new records of adventive species are provided For Ontario 47 new provincial records and 25 new Canadian records are provided and 5 species are described as new to science For Yukon Territory 20 new territorial records and 1 new Canadian record are provided and 9 species are described as new to science A total of 253 new provincial territorial records 37 new Canadian records and 14 species new to science are treated in this volume Lectotypes are designated for several species and seven synonyms are proposed All new species and many species representing new distributional records are illustrated by color habitus images and black and white images of the genital structures This volume on Canadian rove beetle biodiversity contributes new taxonomic research and important baseline data and significantly updates the known staphylinid faunas of New Brunswick Ontario Yukon Territory and Canada

Using the Biological Literature Diane Schmidt, 2014-04-14 The biological sciences cover a broad array of literature types from younger fields like molecular biology with its reliance on recent journal articles genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries *Using the Biological Literature A Practical Guide Fourth Edition* is an annotated guide to selected resources in the biological sciences presenting a wide ranging list of important sources This completely revised edition contains numerous new resources and descriptions of all entries including textbooks The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature It covers both print and electronic resources including monographs journals databases indexes and abstracting tools websites and associations providing users with listings of authoritative informational resources of both classical and recently published works With chapters devoted to each of the main fields in the basic biological sciences this book offers a guide to the best and most up to date resources in biology It is appropriate for anyone interested in searching the biological literature from undergraduate students to faculty researchers and librarians The guide includes a supplementary website dedicated to keeping URLs of electronic and web based resources up to date a popular feature continued from the third edition

Yee, 2023-01-01 The 2nd edition of this comprehensive book provides one of the most complete overviews of the aquatic beetles in the family Dytiscidae also known as predaceous diving beetles Dytiscids constitute one of the largest families of freshwater insects with approximately 4 650 named species that come in a variety of sizes colors and habitat affinities Although dytiscid adults and larvae are ubiquitous throughout a variety of aquatic habitats and are important predators on other aquatic invertebrates and vertebrates there are no compilations that have focused on summarizing the knowledge on aspects of their ecology systematics and biology Chapters in this book summarize hitherto scattered topics including their anatomy and habitats chemical and community ecology phylogenies and larval morphology including chaetotaxy sexual systems predation dispersal conservation and cultural and historical aspects The 2nd edition offers updates on the newest scientific findings on dytiscids and also includes a new chapter on the subterranean fauna from Australia The information in this new edition is potentially beneficial to anyone working in aquatic systems where dytiscids are an important part of the food web Moreover readers will gain a greater appreciation of dytiscids as model organisms for investigations of fundamental principles derived from ecological and evolutionary theory Contributed chapters are by authors who are actively engaged in studying dytiscids and each chapter provides color photos and future directions for research Proceedings of a symposium honoring the careers of Ross and Joyce Bell and their contributions to scientific work. Burlington, Vermont, 12-15 June 2010 Terry L. Erwin, 2011-11-16 On the occasion of the 80th birthday of Ross T Bell Professor Emeritus of Entomology at the University of Vermont his colleagues and former students staged a Festschrift in his honor that included his wife and oft times co author Joyce Bell Two days of scientific presentations and a field day resulted in twenty six manuscripts on such diverse organisms as Coleoptera Collembola and Diptera and in such disparate fields as taxonomy phylogeny ecology with a sprinkling of natural history and cyberinfrastructure Mostly the theme of the papers focus on the beetle family Carabidae on which the Bells spent a number of decades in pursuit of information on taxonomy and biology particularly for the wrinkled bark beetles the rhysodines Twenty six scientific contributions make up this volume and they are introduced by the preface and first two papers on the Bells themselves and their other contributions to teaching and natural history studies in the environs of Burlington Vermont **Beetles of Western North America** Arthur V. Evans, 2021-09-28 Beetles are incredibly diverse with over 23 000 named species in the United States alone They take on all hues shapes and sizes from the iridescent green of the Western Cedar Borer to the striking red of the Rose Curculio They can also be found in a wide range of habitats from cold mountain streams to scorching deserts Similar to its eastern counterpart Beetles of Eastern North America this book is a comprehensive guide to the beetles of the US and Canada that can be found west of the Continental Divide It covers over 1 400 species across 130 different families The book begins with a general introduction to beetles with sections on

morphology behavior and natural history and conservation as well as information on how to find and photograph beetles After the introduction there is an illustrated key to common beetle families The family descriptions include information on natural history collection identification common genera and species and similar families *Water Beetles of South Carolina* Janet C. Ciegler, John C. Morse, 2003 *A Faunal Review of Aleocharine Beetles in the Rapidly Changing Arctic and Subarctic Regions of North America (Coleoptera, Staphylinidae)* Jan Klimaszewski, Adam Brunke, Derek S. Sikes, Mikko Pentinsaari, Benoit Godin, Reginald P. Webster, Anthony Davies, Caroline Bourdon, Alfred F. Newton, 2021-08-27 Arctic and Subarctic North America is particularly affected by climate change where average temperatures are rising three times faster than the global average Documenting the changing climate environment of the north requires a structured knowledge of indicator taxa that reflect the effects of climate changes Aleocharine beetles are a dominant group of forest insects which are being used in many projects as indicators of environmental change Many species are forest specialists restricted to certain microhabitats some are generalists and others are open habitat specialists They represent many ecological niches and as such are good indicators for many other species as well The majority of Canadian aleocharine beetle species about 600 spp has been studied and published by Jan Klimaszewski et al 2018 2020 mainly from southern central and western Canada while the northern taxa remain poorly known and documented The aim of the present book is to summarize the knowledge on this insect group in the Arctic and Subarctic North America and to provide a diagnostic and ecological tool for scientists studying and monitoring insects in northern Canada and Alaska The book includes a review of the literature information on 238 species and their habitats taxonomic review images and identification tools **Catalogue of Geadephaga (Coleoptera, Adephaga) of America, north of Mexico** Yves Bousquet, 2012-11-28 This publication provides a comprehensive review of the nomenclature and distribution of the Geadephaga of America north of Mexico Overall 2439 valid species group taxa in 208 genera are catalogued along with their synonyms Besides the usual information pertaining to author s date and page of publication the type locality location of name bearing type first reference establishing each synonym and etymology for many patronymic names are provided for species group names Genus group names are listed with the author s year of publication page citation type species with manner of fixation and etymology for most The geographical distributions of all species group taxa are briefly summarized and their state and province records are indicated About 2500 references are listed with publication dates for many in order to assess priority of names Several new nomenclatural acts are introduced including one new genus group taxon one new replacement name three changes in precedence five new genus group synonymies 65 new species group synonymies one new species group status and 12 new combinations The work includes also a discussion of the notable private North American carabid collections a synopsis of all extant world geadephagan tribes and subfamilies a brief faunistic assessment of the fauna a list of North American fossil Geadephaga a list of North American Geadephaga larvae described or illustrated a list of species described from specimens mislabeled as from North America and a list of unavailable
