Smartphone-Based Real-Time Digital Signal Processing, Third Edition Abhishek Sehgal,Shane Parris,Arian Azarang,Nasser Kehtarnavaz,2022-05-31 Real time or applied digital signal processing courses are offered as follow ups to conventional or theory oriented digital signal processing courses in many engineering programs for the purpose of teaching students the technical know how for putting signal processing algorithms or theory into practical use These courses normally involve access to a teaching laboratory that is equipped with hardware boards in particular DSP boards together with their supporting software A number of textbooks have been written discussing how to achieve real time implementation on these hardware boards This book discusses how to use smartphones as hardware boards for real time implementation of signal processing algorithms thus providing an alternative to the hardware boards that are used in signal processing laboratory courses The fact that mobile devices in particular smartphones have become powerful processing platforms led to the development of this book to enable students to use their own smartphones to run signal processing algorithms in real time

considering that these days nearly all students possess smartphones Changing the hardware platforms that are currently used in applied or real time signal processing courses to smartphones creates a truly flexible laboratory experience or environment for students In addition it relieves the cost burden associated with using dedicated signal processing boards noting that the software development tools for smartphones are free of charge and are well maintained by smartphone manufacturers This book is written in such a way that it can be used as a textbook for real time or applied digital signal processing courses offered at many universities Ten lab experiments that are commonly encountered in such courses are covered in the book It is written primarily for those who are already familiar with signal processing concepts and are interested in their real time and practical aspects Similar to existing real time courses knowledge of C programming is assumed This book can also be used as a self study guide for those who wish to become familiar with signal processing app development on either Android or iOS smartphones tablets

Loftis, Tennyson X. Chen, Jonathan M. Cirella, 2013-09-24 Android mobile devices have become an attractive consumer product because of their portability high definition screens long battery life intuitive user interface and ubiquitous competitive vendor pricing The very feature that has helped with the proliferation of the devices is also one of the most problematic their portability could result in theft potentially allowing data to be compromised For applications deployed to these devices data security requirements need to be incorporated in the design process so these devices can be considered viable data collection tools Researchers at RTI have been working to secure data on Android mobile devices so that selected information on the device can be encrypted and therefore difficult to obtain illegitimately while still making confidential data easy to access We have developed software that will encrypt specific attributes of databases residing on the internal secure digital card SD card of Android devices The method we have developed could also benefit other Android applications requiring secure storage of data on globally readable and writable databases In this occasional paper we discuss the technologies and methods used in our Android database encryption decryption implementation and their potential scalability to broader applications
