And Scientific Peak Boulder Atmospheric Science:

Inventing Atmospheric Science James Rodger Fleming, 2016-02-05 How scientists used transformative new technologies to understand the complexities of weather and the atmosphere told through the intertwined careers of three key figures The goal of meteorology is to portray everything atmospheric everywhere always declared John Bellamy and Harry Wexler in 1960 soon after the successful launch of TIROS 1 the first weather satellite Throughout the twentieth century meteorological researchers have had global ambitions incorporating technological advances into their scientific study as they worked to link theory with practice Wireless telegraphy radio aviation nuclear tracers rockets digital computers and Earth orbiting satellites opened up entirely new research horizons for meteorologists In this book James Fleming charts the emergence of the interdisciplinary field of atmospheric science through the lives and careers of three key figures Vilhelm Bjerknes 1862 1951 Carl Gustaf Rossby 1898 1957 and Harry Wexler 1911 1962 In the early twentieth century Bjerknes worked to put meteorology on solid observational and theoretical foundations His younger colleague the innovative and influential Rossby built the first graduate program in meteorology at MIT trained aviation cadets during World War II and was a pioneer in numerical weather prediction and atmospheric chemistry Wexler one of Rossby's best students became head of research at the U S Weather Bureau where he developed new technologies from radar and rockets to computers and satellites conducted research on the Antarctic ice sheet and established carbon dioxide measurements at the Mauna Loa Observatory in Hawaii He was also the first meteorologist to fly into a hurricane an experience he chose never to repeat Fleming maps both the ambitions of an evolving field and the constraints that checked them war bureaucracy economic downturns and most important the ultimate realization prompted by the formulation of chaos theory in the 1960s by Edward Lorenz that perfectly accurate measurements and forecasts would never be possible

A Scientific Peak Joseph P. Bassi, 2015 Despite having little to suggest its future as an international site for science Boulder Colorado rose to prominence as a center of scientific learning in less than two decades A shifting combination of scientists and sponsors emerged in the post WWII and Cold War era giving rise to a landscape littered with interdisciplinary environmental science labs that would become the National Center for Atmospheric Research NCAR and NOAA's Space Weather prediction Center major players among the many agencies that make up Boulder's science community today This book chronicles the town's meteoric rise from Scientific Siberia to the smartest town in America including the characters such as Walter Orr Roberts the science and the policies that shaped the AstroBoulder home of big science that we know today

Mountain Weather Research and Forecasting Fotini K. Chow, Stephan F.J. De Wekker, Bradley J. Snyder, 2012-08-30 This book provides readers with a broad understanding of the fundamental principles driving atmospheric flow over complex terrain and provides historical context for recent developments and future direction for researchers and forecasters The topics in this book are expanded from those presented at the Mountain Weather Workshop which took place in Whistler British Columbia Canada August 5 8 2008 The inspiration

for the workshop came from the American Meteorological Society AMS Mountain Meteorology Committee and was designed to bridge the gap between the research and forecasting communities by providing a forum for extended discussion and joint education For academic researchers this book provides some insight into issues important to the forecasting community For the forecasting community this book provides training on fundamentals of atmospheric processes over mountainous regions which are notoriously difficult to predict The book also helps to provide a better understanding of current research and forecast challenges including the latest contributions and advancements to the field The book begins with an overview of mountain weather and forecasting challenges specific to complex terrain followed by chapters that focus on diurnal mountain valley flows that develop under calm conditions and dynamically driven winds under strong forcing The focus then shifts to other phenomena specific to mountain regions Alpine foehn boundary layer and air quality issues orographic precipitation processes and microphysics parameterizations Having covered the major physical processes the book shifts to observation and modelling techniques used in mountain regions including model configuration and parameterizations such as turbulence and model applications in operational forecasting The book concludes with a discussion of the current state of research and forecasting in complex terrain including a vision of how to bridge the gap in the future
