The Power of Picture Books in Teaching Math and Science Lynn Columbia, 2017-05-12. This book's 50 plus lessons each based on a different picture book or story will help classroom teachers build a foundation for teaching math, science, and social studies concepts to their students. Each lesson uses children's literature to make challenging abstract concepts relevant to children's lives, inviting them to learn these concepts while responding to a story's illustrations, theme, characters, and plot. The lessons also demonstrate how teachers can use children's literature to meet national standards in math, science, and social studies. Chapters 1 through 5 set the stage for using picture books, discussing the effective imaginative integration of literature into the classroom. Teachers will learn to create an environment that ensures that when children and books come together, the experience is enjoyable and thought provoking. Chapters 6 through 9 provide individual lessons by grade level with detailed activities based on specific books.

Conservation Biology Fred Van Dyke, Rachel L. Lamb, 2020-07-07. This book provides a thorough up to date examination of conservation biology and the many supporting disciplines that comprise conservation science. In this the Third Edition of the highly successful *Conservation Biology Foundations: Concepts Applications*, the authors address their interdisciplinary topic as it must now be practiced and perceived in the modern world. Beginning with a concise review of the history of conservation, the authors go on to explore the interplay of conservation with genetics, demography, habitat, and landscape, aquatic environments, and ecosystem management, and the relationship of all these disciplines to ethics, economics, law, and policy. An entirely new chapter, *The Anthropocene: Conservation in a Human Dominated Nature*, breaks new ground in its exploration of how conservation can be practiced in anthropogenic biomes, novel ecosystems, and urban habitats. The Third Edition includes the popular *Points of Engagement* discussion questions used in earlier editions and adds a new feature, *Information Boxes*, which briefly recap specific case histories described in the text. A concluding chapter offers insight into how to become a conservation professional in both traditional and non traditional roles. The authors, Fred Van Dyke and Rachel Lamb, draw on their expertise as field biologists, wildlife managers, consultants to government and industry, and scholars of environmental law, policy, and advocacy, as well as their many years of effective teaching experience. Informed by practical knowledge and acquired skills, the authors have created a work of exceptional clarity and readability which encompasses both systemic foundations as well as contemporary developments in the field. *Conservation Biology Foundations*
