Advancements in Electric Machines J. F. Gieras, 2008-11-14 Traditionally electrical machines are classified into d c commutator brushed machines induction asynchronous machines and synchronous machines These three types of electrical machines are still regarded in many academic curricula as fundamental types despite that d c brushed machines except small machines have been gradually abandoned and PM brushless machines PMBM and switched reluctance machines SRM have been in mass production and use for at least two decades Recently new topologies of high torque density motors high speed motors integrated motor drives and special motors have been developed Progress in electric machines technology is stimulated by new materials new areas of applications impact of power electronics need for energy saving and new technological challenges The development of electric machines in the next few years will mostly be stimulated by computer hardware residential and public applications and transportation systems land sea and air At many Universities teaching and research strategy oriented towards electrical machinery is not up to date and has not been changed in some countries almost since the end of the WWII In spite of many excellent academic research achievements the academia industry collaboration and technology transfer are underestimated or quite often neglected Underestimation of the role of industry unfamiliarity with new trends and restraint from technology transfer results with time in lack of external financial support and

drastic cline in the number of students interested in Power Electrical Engineering      *Stratospheric Flight* Andras Sóbester,2011-06-28 In this book Dr Andras Sobester reviews the science behind high altitude flight He takes the reader on a journey that begins with the complex physiological questions involved in taking humans into the death zone How does the body react to falling ambient pressure Why is hypoxia oxygen deficiency associated with low air pressure so dangerous and why is it so difficult to design out of aircraft why does it still cause fatalities in the 21st century What cabin pressures are air passengers and military pilots exposed to and why is the choice of an appropriate range of values such a difficult problem How do high altitude life support systems work and what happens if they fail What happens if cabin pressure is lost suddenly or even worse slowly and unnoticed The second part of the book tackles the aeronautical problems of flying in the upper atmosphere What loads does stratospheric flight place on pressurized cabins at high altitude and why are these difficult to predict What determines the maximum altitude an aircraft can climb to What is the coffin corner and how can it be avoided The history of aviation has seen a handful of airplanes reach altitudes in excess of 70 000 feet what are the extreme engineering challenges of climbing into the upper stratosphere Flying high makes very high speeds possible what are the practical limits The key advantage of stratospheric flight is that the aircraft will be above the weather but is this always the case Part three of the book investigates the extreme atmospheric conditions that may be encountered in the upper atmosphere How high can a storm cell reach and what is it like to fly into one How frequent is high altitude clear air turbulence what causes it and what are its effects on aircraft The stratosphere can be extremely cold how cold does it have to be before flight becomes unsafe What happens when an aircraft encounters volcanic ash at high altitude Very high winds can be encountered at the lower boundary of the stratosphere what effect do they have on aviation Finally part four looks at the extreme limits of stratospheric flight How high will a winged aircraft will ever be able to fly What are the ultimate altitude limits of ballooning What is the greatest altitude that you could still bail out from And finally what are the challenges of exploring the stratospheres of other planets and moons The author discusses these and many other questions the known knows the known unknowns and the potential unknown unknowns of stratospheric flight through a series of notable moments of the recent history of mankind s forays into the upper atmospheres each of these incidents accidents or great triumphs illustrating a key aspect of what makes stratospheric flight aviation at the limit      **Airport Passenger Terminal Planning and Design: Spreadsheet models and user's guide** Landrum & Brown,2010 TRB s Airport Cooperative Research Program ACRP Report 25 Airport Passenger Terminal Planning and Design comprises a guidebook spreadsheet models and a user s guide in two volumes and a CD ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides in a single reference document the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport

passenger terminals Volume 1 addresses the airside terminal building and landside components of the terminal complex Volume 2 of ACRP Report 25 consists of a CD ROM containing 11 spreadsheet models which include practical learning exercises and several airport specific sample data sets to assist users in determining appropriate model inputs for their situations and a user s guide to assist the user in the correct use of each model The models on the CD ROM include such aspects of terminal planning as design hour determination gate demand check in and passenger and baggage screening which require complex analyses to support planning decisions The CD ROM is also available for download from TRB s website as an ISO image

Pleter,2024-04-22 This book takes a new approach to air navigation extending the classic scope of positioning and guidance to efficient and safe 4D flight trajectory management Modern air navigation aims at flight trajectories optimisation There is an infinite number of solutions to the classic navigation problem of flying from one airport to another but most of them are wasteful of resources and even risky Minimising all costs and risks incurred by the 4D flight trajectory makes air navigation both efficient and safe which are key factors in air navigation services Beyond minimising fuel burn and CO2 efficiency addresses non CO2 emissions and noise This is a visually intensive book using examples and case studies to illustrate the concepts the physics of navigation and the mathematical models involved Numerical examples reflect its problem solving nature It is useful to aerospace students engineers pilots air traffic controllers technicians and scientists curious about aviation

*Runway Overrun and Collision Southwest Airlines Flight 1248, Boeing 737-7H4, N471WN, Chicago Midway International Airport, Chicago, Ill, December 8, 2005* United States. National Transportation Safety Board,2007 On December 8 2005 about 1914 central standard time Southwest Airlines SWA flight 1248 a Boeing 737 7H4 N471WN ran off the departure end of runway 31C after landing at Chicago Midway International Airport Chicago Illinois The airplane rolled through a blast fence an airport perimeter fence and onto an adjacent roadway where it struck an automobile before coming to a stop A child in the automobile was killed one automobile occupant received serious injuries and three other automobile occupants received minor injuries Eighteen of the 103 airplane occupants 98 passengers 3 flight attendants and 2 pilots received minor injuries and the airplane was substantially damaged The airplane was being operated under the provisions of 14 Code of Federal Regulations Part 121 and had departed from Baltimore Washington International Thurgood Marshall Airport Baltimore Maryland about 1758 eastern standard time Instrument meteorological conditions prevailed at the time of the accident flight which operated on an instrument flight rules flight plan The National Transportation Safety Board determined that the probable cause of this accident was the pilots failure to use available reverse thrust in a timely manner to safely slow

or stop the airplane after landing which resulted in a runway overrun This failure occurred because the pilots first experience and lack of familiarity with the airplane autobrake system distracted them from thrust reverser usage during the challenging landing snip The safety issues discussed in this report include the flight crew s decisions and actions the clarity of assumptions used in on board performance computers SWA policies guidance and training arrival landing distance assessments and safety margins runway surface condition assessments and braking action reports airplane based friction measurements and runway safety areas P ix [Aging, Shaking, and Cracking of Infrastructures](#) Victor E. Saouma, M. Amin Hariri-Ardebili, 2021-04-13 This self contained book focuses on the safety assessment of existing structures subjected to multi hazard scenarios through advanced numerical methods Whereas the focus is on concrete dams and nuclear containment structures the presented methodologies can also be applied to other large scale ones The authors explains how aging and shaking ultimately lead to cracking and how these complexities are compounded by their random nature Nonlinear static and transient finite element analysis is hence integrated with both earthquake engineering and probabilistic methods to ultimately derive capacity or fragility curves through a rigorous safety assessment Expanding its focus beyond design aspects or the state of the practice i e codes this book is composed of seven sections Fundamentals theoretical coverage of solid mechanics plasticity fracture mechanics creep seismology dynamic analysis probability and statistics Damage that can affect concrete structures such as cracking of concrete AAR chloride ingress and rebar corrosion Finite Element formulation for both linear and nonlinear analysis including stress heat and fracture mechanics Engineering Models for soil fluid structure interaction uncertainty quantification probabilistic and random finite element analysis machine learning performance based earthquake engineering ground motion intensity measures seismic hazard analysis capacity fragility functions and damage indeces Applications to dams through potential failure mode analyses risk informed decision making deterministic and probabilistic examples Applications to nuclear structures through modeling issues aging management programs critical review of some analyses Other applications and case studies massive RC structures and bridges detailed assessment of a nuclear containment structure evaluation for license renewal This book should inspire students professionals and most importantly regulators to rigorously apply the most up to date scientific methods in the safety assessment of large concrete structures

**Aviation Journey For Smart People** Beatrice Filip, 2021-03-10 I have created this book for motivated people like me who worked hard to achieve their goals never giving up when encountering setbacks This is a book created for pilots but also a guide for passengers who love to travel and want to be always informed We breathe a sigh of relief after a difficult year 2020 It was a year in which we were all tried to balance numerous factors mental social financial professional and family life I believe that there is a winner in everyone s soul We invite you to read the book Aviation Journey for Smart People By means of it we share information about how to prepare for the Aviation Interviews Human Resources Group Exercises Body Language Pilot Aptitude Test with explanations and suggestions for solutions We offer a series of 250 Technical

Questions and Answers Feedback from pilots Simulator Preparation Charts Briefing carefully selected from company manuals which assessors use in all aviation interviews In the second part we invite you to the magical world of the cockpit at 10 000 m to discover together the secrets of aviation
