

# The Main Tool in Studying Geography: Maps- but Maps LIE

Maps Lie: What you see on a map is an **incorrect** and **distorted** representation of the world. **Why?**

- The World is a (3) Dimensional Sphere
- Maps are on paper, which is a (2) Dimensional object

# How To Lie With Maps

**Jack Dougherty, Ilya Ilyankou**

## **How To Lie With Maps:**

*How to Lie with Maps* Mark Monmonier, 2018-04-13 An updated edition of the humorous informative and perceptive guide to how maps can lead us astray Toronto Globe and Mail An instant classic when first published in 1991 *How to Lie with Maps* revealed how the choices mapmakers make consciously or unconsciously mean that every map inevitably presents only one of many possible stories about the places it depicts The principles Mark Monmonier outlined back then remain true today despite significant technological changes in the making and use of maps The introduction and spread of digital maps and mapping software however have added new wrinkles to the ever evolving landscape of modern mapmaking Fully updated for the digital age this new edition of *How to Lie with Maps* examines the myriad ways that technology offers new opportunities for cartographic mischief deception and propaganda While retaining the same brevity range and humor as its predecessors this third edition includes significant updates throughout as well as new chapters on image maps prohibitive cartography and online maps It also includes an expanded section of color images and an updated list of sources for further reading Praise for previous editions of *How to Lie with Maps* Will leave you much better defended against cheap atlases shoddy journalism unscrupulous advertisers predatory special interest groups and others who may use or abuse maps at your expense Christian Science Monitor

*How to Lie with Maps* Mark Monmonier, 2014-12-10 Originally published to wide acclaim this lively cleverly illustrated essay on the use and abuse of maps teaches us how to evaluate maps critically and promotes a healthy skepticism about these easy to manipulate models of reality Monmonier shows that despite their immense value maps lie In fact they must The second edition is updated with the addition of two new chapters 10 color plates and a new foreword by renowned geographer H J de Blij One new chapter examines the role of national interest and cultural values in national mapping organizations including the United States Geological Survey while the other explores the new breed of multimedia computer based maps To show how maps distort Monmonier introduces basic principles of mapmaking gives entertaining examples of the misuse of maps in situations from zoning disputes to census reports and covers all the typical kinds of distortions from deliberate oversimplifications to the misleading use of color Professor Monmonier himself knows how to gain our attention it is not in fact the lies in maps but their truth if always approximate and incomplete that he wants us to admire and use even to draw for ourselves on the facile screen His is an artful and funny book which like any good map packs plenty in little space Scientific American A useful guide to a subject most people probably take too much for granted It shows how map makers translate abstract data into eye catching cartograms as they are called It combats cartographic illiteracy It fights cartophobia It may even teach you to find your way For that alone it seems worthwhile Christopher Lehmann Haupt The New York Times witty examination of how and why maps lie The book conveys an important message about how statistics of any kind can be manipulated But it also communicates much of the challenge aesthetic appeal and sheer fun of maps Even those who hated geography in grammar school might well find a new enthusiasm for the subject after reading

Monmonier's lively and surprising book *Wilson Library Bulletin* A reading of this book will leave you much better defended against cheap atlases shoddy journalism unscrupulous advertisers predatory special interest groups and others who may use or abuse maps at your expense John Van Pelt *Christian Science Monitor* Monmonier meets his goal admirably His book should be put on every map user's must read list It is informative and readable a big step forward in helping us to understand how maps can mislead their readers Jeffrey S Murray *Canadian Geographic* *How to Lie with Maps* Mark S.

Monmonier, 1991 Explains the basic principles of map making tells how to evaluate maps critically and looks at Nazi propaganda maps real estate developers plans and environmental impact maps **Lived Topographies and Their**

**Mediational Forces** Gary Backhaus, John Murungi, 2005-01-01 This collection explores the various forms of narrative semiotic and technological mediation that shape the experience of place From the East End of London to Navajo lands to Ground Zero *Lived Topographies* examines the great effect of language mass media surveillance and other incursions of the contemporary world on topographical experience and description Gary Backhaus and John Murungi have assembled a wide array of scholars to provide an interdisciplinary approach to this subject giving this collection a unique perspective on the phenomenology of place **BOOK JACKET** Title Summary field provided by Blackwell North America Inc All Rights Reserved

**Hands-On Data Visualization** Jack Dougherty, Ilya Ilyankou, 2021-03-11 Tell your story and show it with data using free and easy to learn tools on the web This introductory book teaches you how to design interactive charts and customized maps for your website beginning with simple drag and drop tools such as Google Sheets Datawrapper and Tableau Public You'll also gradually learn how to edit open source code templates like Chart.js Highcharts and Leaflet on GitHub *Hands On Data Visualization* takes you step by step through tutorials real world examples and online resources This practical guide is ideal for students nonprofit organizations small business owners local governments journalists academics and anyone who wants to take data out of spreadsheets and turn it into lively interactive stories No coding experience is required Build interactive charts and maps and embed them in your website Understand the principles for designing effective charts and maps Learn key data visualization concepts to help you choose the right tools Convert and transform tabular and spatial data to tell your data story Edit and host Chart.js Highcharts and Leaflet map code templates on GitHub Learn how to detect bias in charts and maps produced by others *Media Boundaries and Conceptual Modelling* Øyvind Eide, 2016-04-29

*Media Boundaries and Conceptual Modelling* forms part of the humanities tradition by facing one of the fundamental problems since antiquity how different media represent the world we live in It intersects also with the digital by addressing the problem with the help of a digital humanities method computer assisted conceptual modelling And it acknowledges the spatial turn by investigating the boundary between what has traditionally been the two main media for representation of geospatial information texts and maps It contributes to the further development of digital humanities and bridges the two areas of digital humanities and intermedia studies Further it strengthens the theoretical foundation for research and teaching in spatial digital humanities

The book meets the lack of critical discussion of the practice of digital mapping offering a theoretically based understanding of such practices from a humanities perspective More generally it contributes to the theoretical discussion of modelling in digital humanities

*Ethics in Everyday Places* Tom Koch, 2022-11-01 An exploration of moral stress distress and injuries inherent in modern society through the maps that pervade academic and public communications worlds In *Ethics in Everyday Places* ethicist and geographer Tom Koch considers what happens when as he puts it you do everything right but know you've done something wrong The resulting moral stress and injury he argues are pervasive in modern Western society Koch makes his argument from the ground up from the perspective of average persons and through a revealing series of maps in which issues of ethics and morality are embedded The book begins with a general grounding in both moral stress and mapping as a means of investigation The author then examines the ethical dilemmas of mapmakers and others in the popular media and the sciences including graphic artists journalists researchers and social scientists Koch expands from the particular to the general from mapmaker and journalist to the readers of maps and news He explores the moral stress and injury in educational funding poverty and income inequality Why aren't we angry that one in eight fellow citizens lives in federally certified poverty transportation modeling seen in the iconic map of the London transit system and the hidden realities of exclusion and U S graft organ transplantation This uniquely interdisciplinary work rewrites our understanding of the nature of moral stress distress and injury and ethics in modern life Written accessibly and engagingly it transforms how we think of ethics personal and professional amid the often conflicting moral injunctions across modern society Copublished with Esri Press

*The Power of Maps* Denis Wood, John Fels, 1992-01-01 This volume ventures into terrain where even the most sophisticated map fails to lead through the mapmaker's bias Denis Wood shows how maps are not impartial reference objects but rather instruments of communication persuasion and power Like paintings they express a point of view By connecting us to a reality that could not exist in the absence of maps a world of property lines and voting rights taxation districts and enterprise zones they embody and project the interests of their creators Sampling the scope of maps available today illustrations include Peter Gould's AIDS map Tom Van Sant's map of the earth U S Geological Survey maps and a child's drawing of the world *THE POWER OF MAPS* was published in conjunction with an exhibition at the Cooper Hewitt Museum the Smithsonian Institution's National Museum of Design

*The Cognitive Life of Maps* Roberto Casati, 2024-05-14 The mapness of maps how maps live in interaction with their users and what this tells us about what they are and how they work In a sense maps are temporarily alive for those who design draw and use them They have for the moment a cognitive life To grapple with what this means to ask how maps can be alive and what kind of life they have is to explore the core question of what maps are And this is what Roberto Casati does in *The Cognitive Life of Maps* in the process assembling the conceptual tools for understanding why maps have the power they have why they are so widely used and how we use and misuse them Drawing on insights from cognitive science and philosophy of mind Casati considers the main claims around what maps are

and how they work their specific syntax peculiar semantics and pragmatics He proposes a series of steps that can lead to a precise theory of maps one that reveals what maps have in common with diagrams pictures and texts and what makes them different This minimal theory of maps helps us to see maps nested in many cognitive artifacts clock faces musical notation writing calendars and numerical series for instance It also allows us to tackle the issue of the territorialization of maps to show how maps can be used to draw specific spatial inferences about territories From the mechanics of maps used for navigation to the differences and similarities between maps and pictures and models Casati's ambitious work is a cognitive map in its own right charting the way to a new understanding of what maps mean

### **Learning and Teaching with Maps**

Patrick Wiegand, 2006 This title provides a comprehensive account of how young children learn with maps and how teachers can best teach them A particular feature of the book is the integration of digital and conventional mapping

The World of Maps Judith A. Tyner, 2014-01-01 Maps have power they can instruct make life easier mislead or even lie This engaging text provides the tools to read analyze and use any kind of map and assess its strengths and weaknesses Requiring no advanced math skills the book presents basic concepts of symbolization scale coordinate systems and projections It gives students a deeper understanding of the types of maps they encounter every day from turn by turn driving directions to the TV weather report Readers also learn how to use multiple maps and imagery to analyze an area or region The book includes 168 figures among them 22 color plates most of the figures can be downloaded as PowerPoint slides from the companion website

Appendices contain a glossary recommended resources a table of commonly used projections and more

*"Nonscientific"*

*Traditional Maps of China* Yinong Cheng, 2022-08-23 This book analyzes the drawing data and methods of the Chinese ancient maps that are neglected by the previous researches and reevaluates the drawing theories and methods the influences and accuracy of the maps that represents the scientificity of Chinese ancient cartographic drawings

In the Memory of the Map Christopher Norment, 2012-03-15 Throughout his life maps have been a source of imagination and wonder for

Christopher Norment Mesmerized by them since the age of eight or nine he found himself courted and seduced by maps which served functional and allegorical roles in showing him worlds that he might come to know and helping him understand worlds that he had already explored Maps may have been the stuff of his dreams but they sometimes drew him away from places where he should have remained firmly rooted In the Memory of the Map explores the complex relationship among maps memory and experience what might be called a cartographical psychology or cartographical history Interweaving a personal narrative structured around a variety of maps with stories about maps as told by scholars poets and fiction writers this book provides a dazzlingly rich personal and intellectual account of what many of us take for granted A dialog between desire and the maps of his life an exploration of the pleasures utilitarian purposes benefits and character of maps this rich and powerful personal narrative is the matrix in which Norment embeds an exploration of how maps function in all our lives Page by page readers will confront the aesthetics mystery function power and shortcomings of maps causing them to

reconsider the role that maps play in their lives      *Drawing the Line* Mark S. Monmonier,1995 Argues that maps can be manipulated to distort the truth and shows how they have been used for propaganda in international affairs political districting and finding toxic dump sites      *Language, Society and the State in a Changing World* Stanley D. Brunn,Roland Kehrein,2023-04-08 This book addresses the changing contemporary language worlds in three major contexts It first discusses how the language landscape maps of cities are changing as a result of increased migration globalization and global media These features are evident in place names and place name changes as well as the densities and frequencies of language spoken and used in texts The second section discusses how the state itself is responding to both indigenous and heritage groups desiring to be included and represented in the state s political landscapes and also expressions of art and culture In the third section the authors address a number of cutting edge theses that are emerging in the linguistic geography and political words These include the importance of gender anthropogenetic discourse the preservation of endangered languages and challenges to a state s official language policy Through including authors from nine different countries who are writing about issues in twelve countries and their overlapping interests in language mapping language usage and policy and visual representations this book provides inspiring research into future topics at local national regional and international scales      *Maps in the Service of the Nation* Gábor Demeter,Zsolt Bottlik,2021-01-01 The authors seek to answer whether the ethnic maps of the Balkan Peninsula created between 1840 and 1914 can be considered scientific products or whether these maps were merely tools that served the political goals of the Balkan nation states and the regional agenda of the Great Powers Despite evident methodological progress maps were often contradictory indicating that propaganda purposes played an important role during their preparation The book investigates 1 the discrepancy between statistical data and their visualization on maps 2 the reliability of Ottoman statistics and their Western and Balkan interpretations 3 the adequacy of applied visualization techniques and 4 the difference between the quality and content of maps created for the public and those created for political decision makers The authors apply interdisciplinary methods to deconstruct approximately one hundred maps analysing their background data visualization techniques and intentions behind the maps Then they redraw fifty maps with unified categories and scaling to promote comparison applying a different visualization technique      **Railroad Nation** Carlos Arnaldo Schwantes,2025-05-15 From passenger tickets wall calendars and advertising posters to train orders and bills of lading railroads have left a colorful paper trail across America In *Railroad Nation* historian Carlos Arnaldo Schwantes examines a fascinating array of these materials showcasing the railroad industry s incredible variety of eye catching illustrations to enliven their timetables and promotional brochures Schwantes traces the evolution of railroad commercial art from drab black and white broadsides and text only advertisements that the early railroads placed in local newspapers to the riotous m lunge of color graphics in the early twentieth century when the visual appeal of public timetables and their thousands of different brochures enticed settlers to create farms ranches and towns

alongside newly laid tracks Railroad Nation offers readers an unparalleled look at the ephemera of the railroad industry highlighting the vibrant history of railroading in America through its rich tapestry of visual materials *Maps and Monsters in Medieval England* Asa Simon Mittman, 2013-09-13 This study centers on issues of marginality and monstrosity in medieval England In the middle ages geography was viewed as divinely ordered so Britain's location at the periphery of the inhabitable world caused anxiety among its inhabitants Far from the world's holy center the geographic margins were considered monstrous Medieval geography for centuries scorned as crude is now the subject of several careful studies Monsters have likewise been the subject of recent attention in the growing field of monster studies though few works situate these creatures firmly in their specific historical contexts This book sits at the crossroads of these two discourses geography and monstrosity treated separately in the established scholarship but inseparable in the minds of medieval authors and artists Rethinking Map Literacy Ming Xie, Steven Reader, H. L. Vacher, 2021-03-29 This book provides two conceptual frameworks for further investigation of map literacy and fills in a gap in map literacy studies addressing the distinction between reference maps and thematic maps and the varying uses of quantitative map literacy QML within and between the two The text offers two conceptual frameworks and uses specific map examples to explore this variability in map reading skills and knowledge with the goal of informing educational pedagogy and practices within geography and related disciplines The book will appeal to cartographers and geographers as a new perspective on a tool of communication they have long employed in their disciplines and will also appeal to those involved in the educational pedagogy of information and data literacy as a way to conceptualize the development of curricula and teaching materials in the increasingly important arena of the interplay between quantitative data and map based graphics The first framework discussed is based on a three set Venn model and addresses the content and relationships of three literacies map literacy quantitative literacy and background information As part of this framework the field of QML is introduced conceptualized and defined as the knowledge concepts skills and facts required to accurately read use interpret and understand the quantitative information embedded in geographic backgrounds The second framework is of a compositional triangle based on 1 the ratio of reference to thematic map purpose and 2 the level of generalization and or distortion within maps In combination these two parameters allow for any type of map to be located within the triangle as a prelude to considering the type and level of quantitative literacy that comes into play during map reading Based on the two frameworks mentioned above the pedagogical tool of word problems is applied to map literacy in an innovative way to explore the variability of map reading skills and knowledge based on specific map examples *The New Nature of Maps* J. B. Harley, 2002-10-03 In these essays the author draws on ideas in art history literature philosophy and the study of visual culture to subvert the traditional positivist model of cartography and replace it with one grounded in an iconological and semiotic theory of the nature of maps
