□ Objectives:

- 1) Carry out the hinge tutorial (completion today is not expected!)
- 2) Do the tutorial again without using the instruction
- 3) Understand why contact analysis is required, e.g. what is the main differences between this tutorial and tutorial one or two?

Using Additional Techniques to Create and Analyze a Model in Abaqus/CAE

Clustering and Resampling a Sample Model in *AlgebraCloud* requires you to create and upload a very simple model composed of only one part. In the referenced tutorial for the experimental Algebra user you will create and upload a more complex model. The results in these chapters can be seen [here](#).

- It separates all three different parts rather than just one. This technical illustration shows you position instructions of these parts to create the assembly and how you define correct reference surfaces of the assembly.
- It includes parts that you will draw using advanced sketching techniques. You will learn how sketches, datum planes, and coordinate systems, to define the features that make up individual parts. You will also learn how you can modify a part by adding a feature and how finished parts are reassembled.

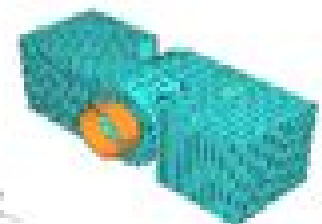

As in *Creating and Analyzing a Simple Model in Abaqus/CAE*, you will apply material properties, loads, and boundary conditions to the model; you will also mesh the model, configure the analysis, and run the analysis job. At the end of the tutorial you will view your analysis results. The entire tutorial takes approximately three hours to complete.

This tutorial assumes that you are familiar with the techniques described in *Creating and Training a Simple Model in AllenNLP*, including the following:

- Using the view manipulation tools to rotate and zoom an object in the viewport.
- Following the prompts in the prompt area.
- Using the mouse to select objects, points, located items, and items within the viewport.
