Gijssels, Richard G. Milder, 2012-03-21 Core concepts in education are changing For example

professional performance or expertise is not uniquely the fruit of specialist knowledge acquired at professional schools but the sum of influences exerted by a complex web of continuous learning opportunities for which an individual is well or ill prepared by their schools and their workplace. The key contributory factors to professional expertise are how professional schools connect to professional practice, how schools prepare graduates for continuous learning and how the workplace endorses continuous development. Thus the question this volume addresses: how to design learning and working environments that facilitate the integration of these three elements is at the heart of contemporary pedagogical theory. The authors also ask a second vital question: how do we educate learners that go on to maximize their life's learning opportunities by regulating their own ongoing learning? *Learning at the Crossroads of Theory and Practice* argues that with the theory of learning at a crossroads, this is an unprecedented opportunity for learning about learning. The book sheds light on different elements of this challenge: integrating theory and practice in business education; generating and fully exploiting workplace learning opportunities; and enriching our classrooms by coupling theoretical knowledge with the richness of real life experience.

Practical Management for the Digital Age Martin Baumeister, John Dominy, 2022-01-31 *Practical Management for the Digital Age* is an innovative introductory management textbook that shows the sweeping impact of information technology on the business world. At the same time, it addresses the pressing issue of how environmental aspects are interwoven with management decisions. It has been written for readers with little or no prior knowledge of management and is compact enough to be read cover to cover over the course of a semester.

Features of this book:

- Provides a broad, self-contained treatment of management for those without prior knowledge of management or commerce, emphasizing core ideas that every manager should know.
- Establishes the context of modern management by characterizing the nature of the private enterprise, the economic theory of the firm, the economics of digitalization and automation, processes of innovation and life cycle thinking.
- Introduces readers to various activities of managing, including business modeling, new business formation, operations management, managing people, marketing and the management of quality and risk.
- Provides practical introductions to broadly applied management techniques, including financial planning, financial analysis, evaluating flows of money and planning and monitoring projects.
