Aashto Roadside Design Guide:

Roadside Design Guide American Association of State Highway and Transportation Officials. Task Force for Roadside Safety, 2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U S Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition AASHTO website **Roadside Safety Analysis Program (RSAP)** King K. Mak, Dean Sicking, National Cooperative Highway Research Program, 2003 **Recommended Guidelines for Curb and Curb-barrier Installations** Chuck A. Plaxico, National Cooperative Highway Research Program, 2005 At head of title National Cooperative Highway Research Program *Human Factors Guidelines for Road Systems* John L. Campbell, 2012 This report completes and updates the first edition of NCHRP Report 600 Human Factors Guidelines for Road Systems HFG which was published previously in three collections The HFG contains guidelines that provide human factors principles and findings for consideration by and is a resource document for highway designers traffic engineers and other safety practitioners Foreword A Policy on Design Standards--Interstate System, 5th Edition, Single User Digital Publication , A Guide for Achieving Flexibility in Highway Design , 2004 Context sensitive solutions CSS reflect the need to consider highway projects as more than just transportation facilities Depending on how highway projects are integrated into the community they can have far reaching impacts beyond their traffic or transportation function CSS is a comprehensive process that brings stakeholders together in a positive proactive environment to develop projects that not only meet transportation needs but also improve or enhance the community Achieving a flexible context sensitive design solution requires designers to fully understand the reasons behind the processes design values and design procedures that are used This AASHTO Guide shows highway designers how to think flexibly how to recognize the many choices and options they have and how to arrive at the best solution for the particular situation or context It also strives to emphasize that flexible design does not necessarily entail a fundamentally new design process but that it can be integrated into the existing transportation culture This publication represents a major step toward institutionalizing CSS into state transportation

departments and other agencies charged with transportation project development *Civil Engineering* Donald G. Newnan, 2004 This volume is a study guide for the civil engineer taking the PE exam Solved problems throughout each chapter reinforce the concepts discussed in the text *Guidance for Implementation of the AASHTO Strategic Highway Safety Plan* , 2008 *Practical Highway Design Solutions* Hugh W. McGee, 2013 Chapter one Introduction Chapter two Results of initial survey of state departments of transportation Chapter three Background information on project development and design methods Chapter four Profiles of states with practical design policies Chapter five Findings conclusions and suggested research *Guidelines for Design and Operation of Nighttime Traffic Control for Highway Maintenance and Construction* James E. Severity Indices for Roadside Features Daniel S. Turner, Jerome W. Hall, 1994 This synthesis will be of interest to highway administrators safety officials design engineers traffic engineers and analysts who are concerned with improving highway safety Severity indices which serve as indicators of the expected injury consequences of a crash are an integral part of the analysis of proposed roadside safety improvements Severity indices that have been developed by many states and research agencies are described as are the issues associated with developing the values and applying and evaluating the indices The history of severity indices the issues associated with estimating accident severity and associated costs and the range of indices that have been developed are described This publication of the Transportation Research Board also discusses the relationship of accident severity indices with the American Association of State Highway and Transportation Officials AASHTO Roadside Design Guide and the Federal Highway Administration FHWA ROADSIDE computer program While research since the 1960s has sought to quantify severity indices for a range of object types and impact conditions there remains a wide variation in the values from which analysts may choose when performing cost effectiveness evaluations
