Al-Qadi, 2009-06-15 Bearing Capacity of Roads Railways and Airfields focuses on issues pertaining to the bearing capacity of highway and airfield pavements and railroad track structures and provided a forum to promote efficient design construction and maintenance of the transportation infrastructure The collection of papers from the Eighth International Conference **Porous Pavements** Bruce Ferguson, 2005-02-18 Pavements are the most ubiquitous of all man made structures and they have an enormous impact on environmental quality They are responsible for hydrocarbon pollutants excess runoff groundwater decline and the resulting local water shortages temperature increases in the urban heat island and for the ability of trees to extend their roots in order to live Porous pavements despite their ability to mitigate these factors remain the object of much skepticism and controversy Written by a renowned expert with 25 years of experience in urban watershed management Porous Pavements is the first comprehensive encyclopedia of porous pavement materials The book begins with five chapters that lay a foundation for all porous pavement materials and applications introducing the types of materials and arrangements their roles in the urban environment and the principles of pavement structure hydrology and rooting space The following nine chapters outline the costs maintenance requirements advantages and disadvantages for different applications installation methods sources of standard specifications and performance levels for each family of porous pavement materials Relying on case studies and factual data from observed experience and containing abundant references for further information Porous Pavements gives responsible practitioners a complete toolbox from which to select the appropriate material for site specific conditions providing a green alternative to impervious pavements Rural Road Engineering in Developing Countries Jasper Cook, Robert Christopher Petts, 2023-08-02 Rural Road Engineering in Developing Countries provides a comprehensive coverage of the planning design construction and maintenance of rural roads in developing countries and emerging nations It covers a wide range of technical and non technical problems that may confront road engineers working in the developing world focusing on rural roads which provide important links from villages and farms to markets and offer the public access to health education and other services essential for sustainable development Most textbooks on road engineering are based on

experience in industrialised countries with temperate climates or deal only with specific issues with many aspects of the design and construction of roads in developing regions stemming from inappropriate research undertaken in Europe and the USA These approaches are frequently unsuitable and unsustainable for rural road network environments particularly in low to middle income countries This book takes on board a more recent research and application focus on rural roads integrating it for a broad range of readers to access current information on good practice for sustainable road engineering in developing countries The book particularly suits transportation engineers development professionals and graduate students in civil engineering
