K. Biesalski, R. Birner, 2018-04-17 Hidden hunger has long been an overlooked problem Vitamin and mineral deficiencies have to be remedied and the availability of calories needs to be increased As a matter of fact the number of people who do not have

Galanakis, 2022-10-12 In recent decades practices like the cultivation of a few high yielding crop varieties on a large scale the application of heavy machinery and continued mechanization of agriculture the removal of natural habitats and the application of pesticides and synthetics have resulted in the simplification of agro ecosystems This has enabled a substantial increase in food production but has at the same time transformed landscapes Indeed there is a concern that a decline in biodiversity has affected microbiome activities that support processes across soils plants animals the marine environment

and humans Although they have increased food production the above practices cannot be considered sustainable in long term applications Biodiversity Functional Ecosystems and Sustainable Food Production explore ecosystems in terms of crop and animal production pest and disease control nutrient cycling and soil fertility Chapters range from agro biodiversity to antimicrobial use in animal food production to microbiome applications for sustainable food systems and the impacts of environment friendly unit operations on the functional properties of bee pollen By examining such topics about each other the text emphasizes how food production ecosystem function food quality and consumer health are all interconnected

Welthunger-Index 2014 Saltzman, Amy,Birol, Ekin,Wiesman, Doris,Prasai, Nilam,Yohannes, Yisehac,Menon, Purnima,Thompson, Jennifer,2014-10-13 Ein Jahr bevor die Frist zur Erreichung der Millenniums Entwicklungsziele im Jahr 2015 abluft bietet der Welthunger Index WHI einen facettenreichen berblick ber die Verbreitung des Hungers und trgt neue Erkenntnisse dar ber in die weltweite Debatte wie

Hunger und Mangelernährung verringert werden können. Betrachtet man die Entwicklungsländer als Gruppe, so hat sich die Hungersituation dort seit 1990 verbessert. Dem WHI 2014 zufolge ist seitdem ein Rückgang um 39 Prozent zu verzeichnen. Trotz dieser Fortschritte ist der Hunger in der Welt weiterhin als ernst einzustufen. Nach Schätzungen der Ernährungs- und Landwirtschaftsorganisation der Vereinten Nationen (FAO) hungern weltweit immer noch 805 Millionen Menschen. Der weltweite Durchschnittswert verdeckt dramatische Unterschiede zwischen Regionen und Ländern. Regional finden sich die höchsten WHI-Werte, und damit das größte Ausmaß von Hunger, in Afrika südlich der Sahara und in Südasien. Dort konnten dennoch seit 2005 die größten absoluten Fortschritte erzielt werden. In Südasien wurde die stärkste absolute Reduzierung des WHI-Werts seit 1990 verzeichnet. Hauptgrund für den verbesserten WHI-Wert in dieser Region sind Fortschritte bei der Bekämpfung des kindlichen Untergewichts.

The present book highlights the importance of mycorrhiza in soil genesis, wherein it reflects mycorrhizal occurrence and diversity, various tools to characterize them, and its impact on soil formation, health, together with crop productivity. The edited compendium provides glimpses on the mycorrhizal fungi and their prominent role in nutrient transfer into host plants, presenting a view on application of mycorrhiza for crop biofortification. It focuses on the mechanisms involved in the weathering process employed by mycorrhiza, with highlighting the current and advanced molecular approaches for studying mycorrhizal diversity. Further, the book emphasizes the following aspects in detail: significance of AMF in phytoremediation of hydrocarbon-contaminated sites; the role of mycorrhiza in soil genesis using scientometric approach; the concept of mycorrhizosphere; xenobiotic metabolism; molecular approaches for detoxifying the organic

Why are women more food insecure than men? Exploring socioeconomic drivers and the role of COVID-19 in widening the global gender gap Mane, E.,Giaquinto, A.M.,Cafiero, C.,Viviani, S.,Anríquez, G.,2024-03-05 Women face a higher prevalence of food insecurity than do men both on a global scale and across all regions This paper delves into the global determinants contributing to the gender gap in food insecurity and explores how the COVID 19 pandemic influenced its trajectory Additionally it estimates the impact of improvements in food security and incomes possible if gender gaps on farm productivity and wages were closed Utilizing data from the Food Insecurity Experience Scale gathered from over 700 000 individuals across 121 countries this study reveals that individuals aged 25 34 years irrespective of their gender and women residing in rural areas have been disproportionately affected by the pandemic The econometric model allows the authors to estimate the elasticities of food security to income which they then use to simulate the potential macrolevel benefits for the economy and food security if we were to eliminate the gender gaps in farm productivity and wages within agrifood systems The findings suggest that addressing these disparities could result in an approximate USD 1 trillion increase in global gross domestic product and lift approximately 45 million people out of food insecurity Additionally the authors estimate that eliminating these gender disparities could reduce the current gap in food insecurity between women and men by at least 57 percent This background paper was prepared to inform Chapters 1 and 6 of FAO s report on The status of women in agrifood systems
