Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation

Relativity of Evolution Markus Knoflacher, 2024-08-02 This book focuses primarily on evolutionary processes rather than evolutionary history Topics covered are abiotic framework conditions morphology and physiology of living organisms fossil and molecular evidence of evolutionary developments The basic processes of biological evolution are already established in unicellular organisms Evolutionary options for multicellular

organisms arise in a simplified way from the usable energetic transformation potentials and the dynamics of abiotic and biotic interactions Evolutionary processes of multicellular organisms are therefore predominantly determined by the conditions of the surrounding systems This is most clearly shown by comparisons of the evolutionary development of vertebrates under marine and terrestrial conditions For reasons of efficiency alone no single species can have the equipment to capture and sustainably shape the surrounding systems in the long term Depending on the available energetic transformation potentials a single species is very well able to change the surrounding systems but without being able to capture the resulting long term consequences This gives rise to fundamentally new questions for the design and limits of social action that makes sense in the long term This book is a translation of an updated and revised version of the original German work *Relativität der Evolution* ISBN 978 3 662 63936 8 Translated by Robert D Martin
