

8) As I was changing my room around I turned a piece of furniture 75% of a straight angle. I didn't like how it looked so I then turned it  $\frac{3}{5}$  of a right angle in the same direction. Still not liking how it looked I then turned it in the opposite direction and this time went  $\frac{2}{9}$  of a right angle. I left it alone. At what degree did this piece of furniture finally end up?

9) There were 45 clocks in the clock shop. At the top of the hour the large hands on all 45 clocks all turned at once and made a complete turn. Then at the quarter of the hour all of these hands turned  $\frac{1}{4}$  of a complete turn in the same direction as they did before. Altogether how many degrees did all of these hands make?

10) There were 15 kids all playing around to see how dizzy they could get. (?) They all made a complete turn 3 times each. After this they all made a half complete turn going in the same direction. How many degrees did all of these dizzy kids turn?

11) Two of my friends bought Frisbees. When one of my friends threw his Frisbee, it made  $36\frac{1}{2}$  complete turns. When my other friend threw her Frisbee, it made  $42\frac{2}{3}$  complete turns. How many more degrees did my girlfriend's Frisbee turn than my boyfriend's?

12) When the student was told to take off his hat, he threw it across the room to land it on the bookcase. As it went flying by it made 12 complete turns. When another student picked it up and threw it back at him, the hat made 18.50 complete turns. How many degrees did this student's hat turn in both of these throws?

13) You know what it means when a kid says they "did a 360". Three of the kids in school went snowboarding last week. One of the kids who went said he did a 360 five times. Another kid who went told us he did a 360 eight times and then

did another  $\frac{1}{2}$  turn. The third kid who went said she did a 360 twelve times.

colored images that clutter the pages of a typical modern textbook while the mathematical content is diluted more and more with each successive edition Professor Robin Hartshorne University of California at Berkeley The textbook Euclidean Geometry by Mark Solomonovich fills a big gap in the plethora of mathematical textbooks it provides an exposition of classical geometry with emphasis on logic and rigorous proofs I would be delighted to see this textbook used in Canadian schools in the framework of an improved geometry curriculum Until this day comes I highly recommend Euclidean Geometry by Mark Solomonovich to be used in Mathematics Enrichment Programs across Canada and the USA Professor Yuly Billig Carlton University
