\_\_\_\_\_ is a strong acid which can be used to clean rust off of steel. \_\_\_\_\_, commonly known as lye, is a highly caustic base that is used to make soap. Both of these substances can cause severe burns if they come in contact with human skin. However, when these two very dangerous substances combine, they form \_\_\_\_\_ and \_\_\_\_\_, both of which are completely harmless.

This process of combining acids and bases to make salts and water is known as \_\_\_\_\_. In this reaction, the acid and base \_\_\_\_\_ each other out.

There are many different kinds of salts. In general, a salt is a compound of positive and negative \_\_\_\_\_. Often the positive ions are \_\_\_\_\_ such as sodium and the negative ions are \_\_\_\_\_ such as chlorine.

In the absence of water, these ions can form \_\_\_\_\_ which have a high \_\_\_\_\_ point and are brittle. Many salts \_\_\_\_\_ readily in water.

Cox,2013-01-31 Acids and bases are ubiquitous in chemistry Our understanding of them however is dominated by their behaviour in water Transfer to non aqueous solvents leads to profound changes in acid base strengths and to the rates and equilibria of many processes for example synthetic reactions involving acids bases and nucleophiles isolation of pharmaceutical actives through salt formation formation of zwitter ions in amino acids and chromatographic separation of substrates This book seeks to enhance our understanding of acids and bases by reviewing and analysing their behaviour in non aqueous solvents The behaviour is related where possible to that in water but correlations and contrasts between solvents are also presented Fundamental background material is provided in the initial chapters quantitative aspects of acid base equilibria including definitions and relationships between solution pH and species distribution the influence of molecular structure on acid strengths and acidity in aqueous solution Solvent properties are reviewed along with the magnitude of the interaction energies of solvent molecules with especially ions the ability of solvents to participate in hydrogen bonding and to accept or donate electron pairs is seen to be crucial Experimental methods for determining dissociation constants are described in detail In the remaining chapters dissociation constants of a wide range of acids in three distinct classes of solvents are discussed protic solvents such as alcohols which are strong hydrogen bond donors basic polar aprotic solvents such as dimethylformamide and low basicity and low polarity solvents such as acetonitrile and tetrahydrofuran Dissociation constants of individual acids vary over more than 20 orders of magnitude among the solvents and there is a strong differentiation between the response of neutral and charged acids to solvent change Ion pairing and hydrogen bonding equilibria such as between phenol and phenoxide ions play an increasingly important role as the solvent polarity decreases and their influence on acid base equilibria and salt formation is described     **Acids and Bases** Carol Baldwin,2004 One of a series of titles on science subjects aimed at reluctant readers this book looks at the chemistry of acids     *Solutions, Acids and Bases : Level 4 Chemistry Module SC 4.4* Algonquin College.
