Extension Training Program ,1986 *Computer Applications in Near Net-Shape Operations* Andrew Y.C. Nee, Soh K. Ong, Yun G. Wang, 2012-12-06 Having edited Journal of Materials Processing Technology previously entitled Journal of Mechanical Working Technology for close on 25 years I have seen the many dramatic changes that have occurred in the materials processing field Long gone are the days when the only materials processing carried out was virtually the forming of conventional metals and alloys and when the development of a new product or process in a great number of cases called for several months of repetitive trial and error with many mostly intuition or experience based expensive and time consuming modifications being made to the dies until success was achieved Even when a successful product was formed its mechanical properties in terms of springback and dimensional accuracy thickness variations residual stresses surface finish etc remained to be determined Bulk forming operations usually required expensive machining to be carried out on the product to impart the required dimensional accuracy and surface finish Over the years the experience based craft of metal forming has given way to the science of materials processing With the use of the computer forming operations can be simulated with accuracy to determine the best forming route and the associated forming loads and die stresses and to predict the mechanical properties of the formed product even down to its surface texture *Argentine Republic Antarctic Research* ,1988

Computational Inverse Techniques in Nondestructive Evaluation G.R. Liu, X. Han, 2003-06-27 Ill posedness Regularization Stability Uniqueness To many engineers the language of inverse analysis projects a mysterious and frightening image an image made even more intimidating by the highly mathematical nature of most texts on the subject But

the truth is that given a sound experimental strategy most inverse engineering problems can be solved. Advanced Smart Grid Functionalities Based on PowerFactory Francisco Gonzalez-Longatt, José Luis Rueda Torres, 2017-12-29 This book consolidates some of the most promising advanced smart grid functionalities and provides a comprehensive set of guidelines for their implementation evaluation using DIGSILENT Power Factory It includes specific aspects of modeling simulation and analysis for example wide area monitoring visualization and control dynamic capability rating real time load measurement and management interfaces and co simulation for modeling and simulation of hybrid systems It also presents key advanced features of modeling and automation of calculations using PowerFactory such as the use of domain specific DSL and DIGSILENT Programming DPL languages and utilizes a variety of methodologies including theoretical explanations practical examples and guidelines Providing a concise compilation of significant outcomes by experienced users and developers of this program it is a valuable resource for postgraduate students and engineers working in power system operation and planning
