CLASSIFICATION OF MATTER

Pure substances are elements or compounds. A pure substance has a specific melting or boiling point.

Mixtures are combinations of two or more substances. They are not chemically bonded together. They keep their own physical properties because they do not create a new substance. You can tell if a substance is a mixture if it can easily be separated into its components (such as through filtration or with a magnet.)

A

B

C

- Samples A, B, and C contain samples of matter.
 - Explain in terms of composition why sample A represents a pure substance.
It contains only molecules of the same arrangement and relative size.
 - Explain why sample C would represent a mixture of Fluorine and Hydrogen chloride.
Fluorine is diatomic so represented by 2 symbols of the same size. HCl is then represented by a small circle for H attached to a larger circle for Cl.
 - Contrast sample A and B in terms of pure substances and mixtures.
B and C are mixtures of 2 different molecules while A is all the same molecules.
