## Student Exploration: Circuit Builder

**Directions:** Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

**Vocabulary:** circuit, closed circuit, conductor, current, electron, fuse, insulator, open circuit, parallel circuit, series circuit, short circuit

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

1. What do a light bulb, a toaster, a radio, and a computer all have in common?

They all have electrical currents

2. Suppose you connect a battery to a small light bulb with a single wire. What do you think will happen? Explain your answer.

for the electricity to flow to the light bulb the circuit needs to be complete. if you only connect the one wire to a battery the circuit wouldn't be complete therefore making the light bulb not have light

**Gizmo Warm-up: Build a circuit**

1. Using the **Standard components** in the upper left of the Gizmo, try to get a light bulb to light up. You can drag as many bulbs, wires, batteries, switches and fuses as you like onto the circuit board.

A **circuit** is a path containing easily moveable charges. When the light bulb lights up, negatively-charged particles called **electrons** are flowing through the wire and bulb. This flow is called **current**.

2. Now try to light the bulb with the smallest number of components.

 Hand draw in this space or click here to select EDIT to use the drawing tool.

**Circuit Design** Stephan Weber,Candido Duarte,2022-09-01 Circuit Design Science Art Designers need a skilled gut feeling about circuits and related analytical techniques plus creativity to solve all problems and to adhere to the specifications the written and the unwritten ones You must anticipate a large number of influences like temperature effects supply voltages changes offset voltages layout parasitics and numerous kinds of technology variations to end up with a circuit that works This is challenging for analog custom digital mixed signal or RF circuits and often researching new design methods in relevant journals conference proceedings and design tools unfortunately gives the impression that just a wild bunch of advanced techniques exist On the other hand state of the art tools nowadays indeed offer a good cockpit to steer the design flow which include clever statistical methods and optimization techniques Actually this almost presents a second breakthrough like the introduction of circuit simulators 40 years ago Users can now conveniently analyse all the problems discover quantify verify and even exploit them for example for optimization purposes Most designers are caught up on everyday problems so we fit that wild bunch into a systematic approach for variation aware design a designer s field guide and more That is where this book can help Circuit Design Anticipate Analyze Exploit Variations starts with best practise manual methods and links them tightly to up to date automation algorithms We provide many tractable examples and explain key techniques you have to know We then enable you to select and setup suitable methods for each design task knowing their prerequisites advantages and as too often overlooked their limitations as well The good thing with computers is that you yourself can often verify amazing things with little effort and you can use software not only to your direct advantage in solving a specific problem but also for becoming a better skilled more experienced engineer Unfortunately EDA design environments are not good at all to learn about advanced numerics So with this book we also provide two apps for learning about statistic and optimization directly with circuit related examples and in real time so without the long simulation times This helps to develop a healthy statistical gut feeling for circuit design The book is written for engineers students in engineering and CAD methodology experts Readers should have some background in standard design techniques like entering a design in a schematic capture and simulating it and also know about major technology aspects Bob Grossblatt's Guide to Creative Circuit Design Robert Grossblatt,1992
