particularly important from a biogeographical and an ecological point of view since they have limited dispersal ability are often endemic to small geographic areas and are extremely diverse ecologically. They also represent an excellent model group of animals to study the physiological adaptations related to the transition from an aquatic to a terrestrial way of life. This special issue of *ZooKeys* includes a collection of 20 papers presented during the 8th International Symposium on Terrestrial Isopod Biology which was held at Bled, Slovenia, from 19th to 23rd June 2011. Contributions address a wide range of topics related to terrestrial isopods such as systematics, biogeography, morphology, physiology, molecular biology, microbiology, and ecology. Two contributions are related to the state of the art and future perspectives on biomineralizations in crustaceans and ecotoxicology in soil fauna. This special issue will be of great value for anyone interested in the biology of crustaceans in general and of terrestrial isopods in particular, stimulating future research on this unique group of animals.

Spatial Analysis in Health Geography Pavlos Kanaroglou, Eric Delmelle, 2016-03-09. Presenting current research on spatial epidemiology, this book covers topics such as exposure, chronic disease, infectious disease, accessibility to health care settings, and new methods in Geographical Information Science and Systems. For epidemiologists and for the management and administration of health care settings, it is critical to understand the spatial dynamics of disease. For instance, it is crucial that hospital administrators develop an understanding of the flow of patients over time, especially during an outbreak of a particular disease, so they can plan for appropriate levels of staffing and to carry out adaptive prevention measures. Furthermore, understanding where and why a disease occurs at a certain geographic location is vital for decision makers to formulate policy to increase the accessibility to health services, either by prevention or adding new facilities. Spatial epidemiology relies increasingly on new methodologies such as clustering, algorithms, visualization, and space-time modelling. The domain of Geographical Information Science Implementation of those techniques appears at an increasing pace in commercial Geographic Information Systems alongside more traditional techniques that are already part of such systems. This book provides the latest methods in GI Science and their use in health-related problems.

Urbanization, Biodiversity and Ecosystem Services: Challenges and Opportunities Thomas Elmqvist, Michail Fragkias, Julie Goodness, Burak Güneralp, Peter J. Marcotullio, Robert I. McDonald, Susan Parnell, Maria Schewenius, Marte Sendstad, Karen C. Seto, Cathy Wilkinson, 2013-09-21. Urbanization is a global phenomenon and the book emphasizes that this is not just a social technological process. It is also a social ecological process where cities are places for nature and where cities also are dependent on and have impacts on the biosphere at different scales from local to global. The book is a global assessment and

delivers four main conclusions Urban areas are expanding faster than urban populations Half the increase in urban land across the world over the next 20 years will occur in Asia with the most extensive change expected to take place in India and China Urban areas modify their local and regional climate through the urban heat island effect and by altering precipitation patterns which together will have significant impacts on net primary production ecosystem health and biodiversity Urban expansion will heavily draw on natural resources including water on a global scale and will often consume prime agricultural land with knock on effects on biodiversity and ecosystem services elsewhere Future urban expansion will often occur in areas where the capacity for formal governance is restricted which will constrain the protection of biodiversity and management of ecosystem services
