Artificial Intelligence Foundations Of Computational Agents Solution Manual:

Artificial Intelligence David L. Poole, Alan K. Mackworth, 2010-04-19 Recent decades have witnessed the emergence of artificial intelligence as a serious science and engineering discipline. This textbook aimed at junior to senior undergraduate students and first year graduate students presents artificial intelligence AI using a coherent framework to study the design of intelligent computational agents. By showing how basic approaches fit into a multidimensional design space, readers can learn the fundamentals without losing sight of the bigger picture. The book balances theory and experiment, showing how to link them intimately together and develops the science of AI together with its engineering applications. Although structured as a textbook, the book's straightforward self-contained style will also appeal to a wide audience of professionals, researchers, and independent learners. AI is a rapidly developing field; this book encapsulates the latest results without being exhaustive and encyclopedic. The text is supported by an online learning environment AIspace (<http://aispace.org>) so that students can experiment with the main AI algorithms, plus problems, animations, lecture slides, and a knowledge representation system Alleg for experimentation and problem solving.

Artificial Intelligence In Highway Location And Alignment Optimization: Applications Of Genetic Algorithms In Searching, Evaluating, And Optimizing Highway Location And Alignments

Min-wook Kang, Paul Schonfeld, 2020-08-14 This monograph provides a comprehensive overview of methods for searching, evaluating, and optimizing highway location and alignments using genetic algorithms. GAs are a powerful Artificial Intelligence AI technique. It presents a two-level programming structure to deal with the effects of varying highway location on traffic level changes in surrounding road networks within the highway location search and alignment optimization process. In addition, the proposed method evaluates environmental impacts as well as all relevant highway costs associated with its construction, operation, and maintenance. The monograph first covers various search methods, relevant cost functions, constraints, computational efficiency, and solution quality issues arising from optimizing the highway alignment optimization HAO problem. It then focuses on applications of a special purpose GA in the HAO problem where numerous highway alignments are generated and evaluated, and finally the best ones are selected based on costs, traffic impacts, safety, energy, and environmental considerations. A review of other promising optimization methods for the HAO problem is also provided in this monograph.
