## **Atls Manual:**

*ATLS, Advanced Trauma Life Support for Doctors*, 2008-01-01      **Emergencies in Urology** M. Hohenfellner, R.A. Santucci, 2007-08-18

*Emergencies in Urology* is a comprehensive textbook covering one of the few remaining white spots on the map of urological literature. To date only a small number of publications have been dedicated to the topic of urgent and emergent problems in urology important as these are in our daily clinical life. Therefore the editors both of them internationally recognized urological experts have taken the effort to present an in depth study into virtually every possible urgent urological situation with which a urologist may be confronted today. Consequently the book includes chapters on topics such as urological trauma, urosepsis, urinary obstruction, oncological emergencies, intra and postoperative complications, acute problems in children and many more. To obtain the best possible expertise in such a wide field, renowned expert authors have contributed their experience to this book. They did so not only by writing the regular book chapters but also by delivering short stories about urgent situations they encountered in their own professional life. These vignettes are one of the rare opportunities where experience can be relayed without restriction from one urological generation to the next. Much work has gone into the illustrations for the book. Foremost in this respect is the art of Stephan Spitzer, one of the leading medical illustrators of today. The result is a comprehensive, well organized text in which state of the art knowledge, didactic algorithms, personal experience and detailed illustrations are combined into a unique guide of how to manage urological emergencies.

**Trauma Operative Procedures** G. Berlot, H. Delooz, A. Gullo, 2012-12-06 Trauma has assumed a prominent role in contemporary medicine as an event that can significantly influence clinical variables such as morbidity functional deficits and consequential disability and mortality Trauma is the principal cause of death in the population below 40 years of age in industrialized countries Therefore there is great interest in studying traumatic events from both the clinical and epidemiological viewpoints The importance of trauma is exemplified by the fact that in many countries the trauma patient is first treated in specialized trauma centers in which the diagnostic and treatment processes are facilitated by the 24 hour presence of personnel having interdisciplinary competencies Trauma in this context consists of any acute often unexpected condition Many of the medical difficulties associated with trauma occur in a relatively brief period that spans from the first call for help to the initiation of first aid measures A correct approach depends on the availability of experienced personnel The first measures of aid must guarantee above all the patient's survival The most critical initial phases of care to trauma patients are represented by the triad first aid triage and transport Specific morbidity indices whether anatomical functional or mixed are indispensable elements for monitoring a patient's clinical evolution The immediate availability of essential drugs is imperative to confront the clinical situations that often present in the acute post traumatic phase
