Alexander, Herbert J. Proctor, 1993-01-01 Legal Aspects of Medicine James R. Vevaina, Roger C. Bone, Edwin Kassoff, 2012-12-06 The simple reason for creating this book was my impression that the law is having an increasing impact on the practice of medicine There is hardly a physician I know who has not been deeply troubled by legal problems professionally economically and most important of all psychologically The past decade has seen medical practice premiums steadily rising Multimillion dollar verdicts have not been unusual Having disregarded these vital issues for many years physicians have suddenly become very aware of litigation related problems Having been interested for a long time in the logic of the law and the romance of legal research I thought it would be useful to

create a book that would result in the blending of great minds in law and medicine It has been my long standing observation and belief that the approach of professors of medicine and that of learned members of the bar and bench when put together produce unique results Putting these views together has been the real challenge in editing this book *Emergency Management of the Trauma Patient* Mark Bisanzo,Kriti Bhatia,Michael R. Filbin,2007 Emergency Management of the Trauma Patient Cases Algorithms Evidence provides a practical and realistic approach to managing a trauma code with a complete review of ATLS protocols Each chapter begins with the presentation of a trauma scenario and emphasizes the clinical skills needed to make important management decisions Literature references are highlighted within the chapters and provide a discussion of pivotal journal articles relevant to the topic at hand Algorithms are integrated into the chapters to serve as a roadmap for patient management Emergency and Disaster Medicine C. Manni,S.I. Magalini,2012-12-06 C Manni The focusing of general interest and of many disciplines on disaster medicine is an interesting and recent phenomenon in our society Disasters have by now left the his torical and philosophical sphere and finally entered the operational arena Modern man in other words no longer accepts disasters in a passive and fatalistic manner but claims to be able to control them like so many other forces of nature The new approach is aimed at preventing containing and remedying the invariably tragic consequences of these events The role of medicine in this context is of fundamental importance and is charac terized by two main aspects application of techniques of intervention appropriately and effectively and collaboration with the general organization assuming responsi bility for the protection of health and the treatment of injuries Following a period of more or less chaotic growth during which sectionalism and empirical interests prevailed and localized aspects of this new discipline underwent considerable development a need is now felt to propose and realize a more com prehensive scientific approach It has become necessary to identify and to rationally analyze the individual components of this branch of medicine As in any analysis the recognition of the object of the research is of fundamental importance hence the title of this first round table
