Bridging the Gap Between Policy and Science in Assessing the Health Status of Marine Ecosystems, 2nd Edition Angel Borja, Michael Elliott, María C. Uyarra, Jacob Carstensen, Marianna Mea, 2017-03-22 Marine management requires approaches which bring together the best research from the natural and social sciences It requires stakeholders to be well informed by science and to work across administrative and geographical boundaries a feature especially important in the inter connected marine environment Marine management must ensure that the natural structure and functioning of ecosystems is maintained to provide ecosystem services Once those marine ecosystem services have been created they deliver societal goods as long as society inputs its skills time money and energy to gather those benefits However if societal goods and benefits are to be limitless society requires appropriate administrative legal and management mechanisms to ensure that the use of such benefits do not impact on environmental quality but instead support its sustainable use

Bioremediation and Biotechnology, Vol 3 Rouf Ahmad Bhat, Khalid Rehman Hakeem, Najla Bint Saud Al-Saud, 2020-07-08 Healthy environment is important for any kind of biota on earth It provides the basic elements of life such as clean water fresh air fertile soil and supports ecosystem of the food chain Pollution drastically alters quality of the environment by changing the physico chemical and biological aspects of these components Accordingly toxic metals combustible and putrescible substances hazardous wastes explosives and petroleum products are all examples of inorganic and organic compounds that cause contaminations Specifically pollution of toxic and heavy metal in the environment is a growing problem worldwide currently at an alarming rate Toxic metals threaten the aquatic ecosystems agriculture and ultimately human health Traditional treatment techniques offer certain advantages such as rapid processing ease of operation and control and flexibility But they could not maintain the quality of the environment due to the high operational costs of chemicals used high energy consumption and handling costs for sludge disposal and overburden of chemical substances which irreversibly affect and destroy biodiversity which ultimately render the soil useless as a medium for plant growth Therefore bioremediation and biotechnology carried out by living assets to clean up stabilize and restore contaminated ecosystems have emerged as promising environmental friendly and affordable approaches Furthermore the use of microbes algae transgenic plants and weeds adapted to stressful environments could be employed to enhance accumulation efficiency Hence sustainable and inexpensive processes are fast emerging as a viable alternative to conventional remediation methods
