Chemicals in the Environment and Brain Development: Importance of Neuroendocrinological Approaches Fumihiko Maekawa, Kazuaki Nakamura, Shoji F. Nakayama, 2017-05-11 Mounting evidence shows that increasing numbers of children are being diagnosed with neurodevelopmental disorders and it is clear that this increase cannot be explained by genetic background alone A number of studies including epidemiological studies have found an association between in utero and childhood exposure to certain chemicals such as endocrine disruptors psychoactive pharmaceuticals volatile organic chemicals persistent organic compounds and heavy metals and children s brain development Yet the mechanisms by which these chemicals impair brain development and function are not fully understood In addition little is known about how these chemicals enter and accumulate in the brain Experimental approaches are essential to understand how those harmful chemicals enter children s brain and pose discrete effects on specific brain sites These approaches include the following improvement of technologies for the detection and measurement of neuroendocrinological and behavioral changes in animal models development of analytical methods for the identification and quantification of chemicals and their metabolites in the brain development of in vitro cell line assays and imaging technologies to illustrate cellular functions In this research topic we collected articles that provide state of the art science and technologies that can help us identify environmental chemicals that influence brain development We also included articles that lead to a better understanding of the actions and dynamics of these chemicals The articles in this research topics supplied novel information about harmful endpoints of environmental chemicals The reviews demonstrated the typical and novel interactions between environmental chemicals and the developing brain We believe that these studies would lead to further understanding of neurodevelopmental disorders caused by environmental factors **Environmental Release of and Exposure to Iron Oxide and Silver Nanoparticles** Henning Wigger, 2017-01-09 In this thesis a prospective approach was developed to identify and to assess current as well as potentially upcoming product applications with focus on environmental releases and exposures of engineered nanomaterials The developed product application scenarios were illustrated in case studies on iron oxide and silver nanoparticles It was

shown that despite of prevailing knowledge gaps reasonable estimations for environmental releases and exposures can be made This novel approach facilitates the identification of early indicators for precautionary risk management measures and among them benign by design concepts in technology and product development

Linking Optical and Chemical Properties of Dissolved Organic Matter in Natural Waters Christopher L. Osburn, Thomas S. Bianchi, 2017-01-17 A substantial increase in the number of studies using the optical properties absorbance and fluorescence of dissolved organic matter DOM as a proxy for its chemical properties in estuaries and the coastal and open ocean has occurred during the last decade We are making progress on finding the actual chemical compounds or phenomena responsible for DOM s optical properties Ultrahigh resolution mass spectrometry in particular has made important progress in making the key connections between optics and chemistry But serious questions remain and the last major special issue on DOM optics and chemistry occurred nearly 10 years ago Controversies remain from the non specific optical properties of DOM that are not linked to discrete sources and sometimes provide conflicting information The use of optics which is relatively easier to employ in synoptic and high resolution sampling to determine chemistry is a critical connection to make and can lead to major advances in our understanding of organic matter cycling in all aquatic ecosystems The contentions and controversies raised by our poor understanding of the linkages between optics and chemistry of DOM are bottlenecks that need to be addressed and overcome
