Approximation Theory and Harmonic Analysis on Spheres and Balls Feng Dai, Yuan Xu, 2013-04-17 This monograph records progress in approximation theory and harmonic analysis on balls and spheres and presents contemporary material that will be useful to analysts in this area While the first part of the book contains mainstream material on the subject the second and the third parts deal with more specialized topics such as analysis in weight spaces with reflection invariant weight functions and analysis on balls and simplexes The last part of the book features several applications including cubature formulas distribution of points on the sphere and the reconstruction algorithm in computerized tomography This book is directed at researchers and advanced graduate students in analysis Mathematicians who are familiar with Fourier analysis and harmonic analysis will understand many of the concepts that appear in this manuscript spherical harmonics the Hardy Littlewood maximal function the Marcinkiewicz multiplier theorem the Riesz transform and doubling weights are all familiar tools to researchers in this area Approximation Theory XIV: San Antonio 2013 Gregory E. Fasshauer, Larry L. Schumaker, 2014-06-02 These proceedings were prepared in connection with the 14th International Conference on

Approximation Theory which was held April 7 10 2013 in San Antonio Texas The conference was the fourteenth in a series of meetings in Approximation Theory held at various locations in the United States The included invited and contributed papers cover diverse areas of approximation theory with a special emphasis on the most current and active areas such as compressed sensing isogeometric analysis anisotropic spaces radial basis functions and splines Classical and abstract approximation is also included The book will be of interest to mathematicians engineers and computer scientists working in approximation theory computer aided geometric design numerical analysis and related application areas **Analysis on**

h-Harmonics and Dunkl Transforms Feng Dai, Yuan Xu, 2015-01-21 This book provides an introduction to h harmonics and Dunkl transforms These are extensions of the ordinary spherical harmonics and Fourier transforms in which the usual Lebesgue measure is replaced by a reflection invariant weighted measure The authors focus is on the analysis side of both h harmonics and Dunkl transforms Graduate students and researchers working in approximation theory harmonic analysis and functional analysis will benefit from this book Clifford Analysis and Related Topics Paula Cerejeiras, Craig A. Nolder, John

Ryan, Carmen Judith Vanegas Espinoza, 2018-09-07 This book intended to commemorate the work of Paul Dirac highlights new developments in the main directions of Clifford analysis Just as complex analysis is based on the algebra of the complex numbers Clifford analysis is based on the geometric Clifford algebras Many methods and theorems from complex analysis generalize to higher dimensions in various ways However many new features emerge in the process and much of this work is still in its infancy Some of the leading mathematicians working in this field have contributed to this book in conjunction with Clifford Analysis and Related Topics a conference in honor of Paul A M Dirac which was held at Florida State University Tallahassee on December 15 17 2014 The content reflects talks given at the conference as well as contributions from

Introduction to Analysis in Several Variables: Advanced Calculus Michael E. Taylor, 2020-07-27 This text was produced for the second part of a two part sequence on advanced calculus whose aim is to provide a firm logical foundation for analysis The first part treats analysis in one variable and the text at hand treats analysis in several variables After a review of topics from one variable analysis and linear algebra the text treats in succession multivariable differential calculus including systems of differential equations and multivariable integral calculus It builds on this to develop calculus on surfaces in Euclidean space and also on manifolds It introduces differential forms and establishes a general Stokes formula It describes various applications of Stokes formula from harmonic functions to degree theory The text then studies the differential geometry of surfaces including geodesics and curvature and makes contact with degree theory via the Gauss Bonnet theorem The text also takes up Fourier analysis and bridges this with results on surfaces via Fourier analysis on spheres and on compact matrix groups
