Childress, 2016-05-02 This is a book of advice for students considering doctoral programs and doctoral students considering faculty life. It is framed as a glossary of about 150 terms that author Herb Childress, as a first generation student, wishes that he had known and understood as he applied for and completed his PhD and went into the academic job market. The guide examines the practices of doctoral education and faculty life through entries that illuminate terms such as buyout, edited volume, and FERPA, so many things that most academics learned somewhere along the way and forget that others don't know. The alphabetical reference format enables readers to turn directly to the topic in question and find some borrowed wisdom. Each entry features a little storytelling, then some larger context, and leaves readers able to put on the mask of the capable scholar even though they feel like impostors. Every time they hear a term they feel they ought to know, it is here. The book is often funny as well, attempting to offer both encouragement and reality to students facing unconscionable odds as they search for safe harbor. As more than half of all college instructors are now adjuncts, the questions about an academic career are changing, and there are now fewer reliable answers. Herb Childress's volume promises to be a trusted companion to many a graduate student, aspiring academic, and adjunct professor. *The Chicago Guide to Your Career in Science*

Victor A. Bloomfield, Esam E. El-Fakahany, 2008-11-15 Embarking upon research as a graduate student or postdoc can be exciting and enriching, the start of a rewarding career. But the world of scientific research is also a competitive one with grants and good jobs increasingly hard to find. *The Chicago Guide to Your Career in Science* is intended to help scientists not just cope but excel at this critical phase in their careers. Victor A. Bloomfield and Esam E. El-Fakahany, both well known scientists with extensive experience as teachers, mentors, and administrators, have combined their knowledge to create a guidebook that addresses all of the challenges that today's scientists in training face. They begin by considering the early stages of a career in science: deciding whether or not to pursue a PhD, choosing advisors and mentors, and learning how to teach effectively. Bloomfield and El-Fakahany then explore the skills essential to conducting and presenting research. *The Chicago Guide to Your Career in Science* offers detailed advice on how to pursue research ethically, manage time, and communicate effectively, especially at academic conferences and with students and peers. Bloomfield and El-Fakahany write in accessible, straightforward language and include a synopsis of key points at the end of each chapter so that readers can dip into relevant sections with ease. From students prepping for the GRE to postdocs developing professional contacts to faculty advisors and managers of corporate labs, scientists at every level will find *The Chicago Guide to Your Career in Science* an unparalleled resource. *The Chicago Guide to Your Career in Science* is a roadmap to the beginning stages of a scientific career. I will encourage my own students to purchase it. Dov F. Sax, assistant professor of ecology and evolutionary biology, Brown University.

Step by step Victor Bloomfield and Esam El-Fakahany provide sound, thorough yet succinct advice on every issue a scientist in training is likely to encounter. Young readers will welcome the authors' advice on choosing a graduate school, for example, while senior scientists will probably wish that a book like this had been around when they were starting.
