number will increase to 2 billion a consequence of China and India's explosive growth. Given that greenhouse gases are already creating havoc with our climate, does this mean that matters will only get worse? Detroit, the federal government and not least American consumers have all contributed to the current crisis. Through a concise history of America's love affair with cars and an overview of the global auto industry, Daniel Sperling, one of the nation's leading transportation experts, and Deborah Gordon explain how we arrived at this state and what we can do about it. Most provocatively, the authors contend that the two places that are the most troublesome with regard to emissions, California and China, are the most likely to become world leaders on these issues. Arnold Schwarzenegger's improbable embrace of eco-friendly fuel policies and China's forthright recognition that it needs to address its rampant pollution with a far-reaching emissions policy suggest that if they can tackle the issue effectively and honestly, then there really is reason for hope.

The Economic Geography of the Car Market Bartłomiej Kołsut, Tadeusz Strykiewicz, 2022-09-26 This book provides a comprehensive analysis of long-term changes in the car market of an emerging economy with a focus on its spatial and temporal dimensions. Poland, the case study in question, represents a unique laboratory of automobile revolution during the late 20th and early 21st centuries. The volume brings to the fore several key aspects of the car market, such as car ownership, markets for new cars, import of second-hand cars, car use, electromobility and environmental impact. Many of them are the subject of a global debate in the context of achieving sustainable development goals. Others meanwhile point to the unique nature of transformations related to the car market in Poland. Altogether, consideration of these aspects enriches the international literature with new results and findings that will broaden the field of discussion on the car market onto the emerging economies, especially those of Central and Eastern Europe. The book combines the results of quantitative and qualitative research. The former is based on a big data set of ca. 40 million vehicles, and the latter on an in-depth social survey, questionnaire interviews with more than 4,000 drivers. The discussion of the geography of automobile revolution is linked to other social, economic and spatial phenomena and processes, e.g. urban sprawl or rural marginalisation, consumer decisions and the evolution of quality of life and the development of individual entrepreneurship or environmental protection, as well as

to transport tax and customs policies The analysis of the dynamics of change pays particular attention to the role of critical junctures such as the collapse of the communist system EU membership the world financial crisis 2007 2009 and first period of COVID 19 pandemic 2020 2021 The book will be of interest to scholars students and practitioners dealing with transport research geography of transportation spatial economy urban and regional planning and sustainability studies and for car hobbyists *Kiplinger's Personal Finance* ,2009 Innovations in Sustainability Alfred Allen Marcus,2015-08-13 This insightful book employs high profile company cases to focus on two major challenges for sustainable innovation fuel and food
