

NATURE VS NURTURE

Nature versus nurture is an ongoing debate about the degree to which human behaviour is determined by genetic inheritance (nature) or learned through interactions with the environment (nurture).

NURTURE

Empiricists suggest behaviour is determined by the environment and personal experiences. They believe all human characteristics are a result of social and natural environmental forces that influence development from birth onwards.

- John B. Watson (1905)** conducted a case study on a child known as **Little Albert** to see if it was possible to condition a child to fear a previously unfeared object.
- Little Albert showed no fear response to any stimuli before the experiment.
- Little Albert was presented with a white rat. Each time he reached for it, a steel bar was hit. After seven repetitions, Albert reacted to the rat alone, crying and quickly crawling away, without the bar being hit.
- The fear had been transferred to similar looking objects, including a rabbit and a fur coat.
- One month later, Albert continued to show fear reactions to all similar objects. This provided evidence that the environment can be manipulated to create a phobic response and behavioural change.

Zimbardo (1973) conducted the **Stanford Prison Experiment** to investigate the effect that roles and the environment can have on people's behaviour.

- 24 male students were randomly assigned to the role of 'prisoner' or 'guard'.
- A simulated prison was built in the basement of the psychology building at Stanford University.
- Guards were issued with uniforms, batons, whistles and handcuffs as symbols of control and power.
- As students settled into their roles, their behaviour was affected. Guards became aggressive and abusive. Prisoners became increasingly dehumanised and several experienced acute anxiety and the early stages of deep depression.
- The experiment had to be stopped after just six days.

The Humanistic Approach - explains how people's behaviour is influenced by their perception and understanding of the world.

The Behaviourist Approach - believes all behaviour is learned through a process of conditioning.

The Social Approach - explains how people's behaviour is influenced by the presence of others.

PROBLEMS WITH THE NATURE VS NURTURE DEBATE

- It is reductionist because it states that behaviour is solely caused by genetic factors or experience.
- It is deterministic because reductionists suggest that behaviour is determined by pre-existing factors, and empiricists suggest that behaviour is the result of interactions with the environment.
- It is difficult to control variables. For example, the similarities in twin studies could relate to how the twins were raised. All nurture influences cannot be tested.

NATURE

Nativists suggest that behaviour is caused by innate characteristics that are inherited from our ancestors and how our genetic make-up. They believe genes programme all of our behaviours; some are present from birth, and other behaviours are pre-programmed to emerge in later life.

Gottesman and Shields (1976) reviewed twin and adoption studies to determine whether schizophrenia has a genetic link.

Adoption studies found an increased occurrence of schizophrenia in adopted children with a schizophrenic biological parent. Children fostered to schizophrenic parents and adoptive parents of schizophrenic children showed little evidence of schizophrenia. This indicates a significant genetic input into the onset of schizophrenia.

Twin studies found a higher concordance rate for schizophrenia in identical twins than non-identical twins. (A **concordance rate** is the probability that both individuals in a pair will have a certain characteristic, given that one of the pair has that characteristic.) Importantly, there was a concordance rate of 38% in identical twins compared to 12% in non-identical twins.

Plomin (1986) found that the overall heritability of IQ in identical and non-identical twins was about 68%, which means 68% of IQ was influenced by genetics. When only identical twins that lived apart were studied, the concordance rate increased to 74%, which means they were 74% similar despite living in different environments. Genetic influence appears to be stronger than environmental influence.

The Biological Approach - explains behaviour in relation to the functioning of the brain and nervous system.

NATURE AND NURTURE INTERACTION

Psychologists generally agree that behaviour is a result of the interaction between nature and nurture.

People may contribute to their own environments. As individuals' characteristics may cause people to respond to their environment in a particular way, this may influence the individual's behaviour, emotions and beliefs.

Maguire et al. (2006) conducted a study of taxi drivers and found that the structure of the brain can change as a result of environmental demands.

They studied structural MRI brain scans of London taxi drivers to see if the hippocampus would change because of their high dependence on navigation skills. The posterior hippocampus, which stores a spatial representation of the environment, was larger in taxi drivers than in control participants who did not drive taxis. This indicates that the posterior hippocampus expands in response to people with high dependence on navigational skills.

Genes can be seen as setting the upper and lower limits for people's behaviour.

The environment may determine where an individual's behaviour falls within these limits.

Hippocampus

The Psychodynamic Approach - explains how people's behaviour is influenced by unconscious factors. Freud claimed personality is the product of innate drives and childhood experiences.

The Cognitive Approach - focuses on the way people think and learn, but environment also influences behaviour.

The Developmental Approach - emphasises the importance of both nature and nurture in behavioural development.

Experiencing the Environment Seymour Wapner, 2012-12-06 The purpose of this volume is to explore theory problem formulation and methodology in experiencing the environment In this embryonic field the writings of a number of individuals already stand out as representative of distinctive viewpoints In order to facilitate further development of the field a conference was proposed to gather in one place representatives of a number of major viewpoints with regard to the embryonic field of environmental psychology It was hoped that a colloquy among such representatives would facilitate a clarification of the similarities and differences between the various perspectives and might enable proponents of any given point of view to benefit from the insights of others with different orientations Hopefully it might also promote a greater articulation for this emerging field of inquiry With these ends in mind the sponsors of the conference asked the various prospective participants to present their theoretical positions and representative research illustrative of those positions Some of the perspectives represented at the conference emphasized the point that the construal of phenomena depends heavily on

David C. Rowe, 1994-01-01 Challenging firmly established assumptions about the influence of child rearing on the development of children's personalities and intelligence this book contends that there has been too heavy an emphasis on the family as the bearer of culture It draws from behavior genetic research to reveal how environmental variables such as social class parental warmth and one versus two parent households may be empty of causal influence on child outcomes The book examines the theoretical basis of socialization science and describes in great detail what behavior genetic studies can teach us about environmental influence *Society, Organizations and the Brain: building towards a unified cognitive neuroscience perspective* Carl Senior, Nick Lee, Sven Braeutigam, 2015-07-02 This e book brings together scholars in both the neurosciences and organizational sciences who have adopted various approaches to study the cognitive mechanisms mediating the social behavior that we see within organizations Such an approach has been termed by ourselves and others as organisational cognitive neuroscience In recent years there has been a veritable increase in studies that have explored the cognitive mechanisms driving such behaviors and much progress has been made in understanding the neural underpinnings of processes such as financial exchange risk awareness and even leadership However while these studies are informative and add to our understanding of human cognition they fall short of providing evidence based recommendations for practice Specifically we address the broader issue of how the neuroscientific study of such core social behaviors can be used to improve the very way that we work To address these gaps in our understanding the chapters in this book serve as a platform that allows scholars in both the neurosciences and the organizational sciences to highlight the work that spans across these two fields The consolidation of these two fields also serves to highlight the utility of a singular organizational cognitive neuroscience This is a fundamentally important outcome of the book as the application of neuroscience to address economically relevant behaviors has seen a variety of fields evolve in their own right such as neuromarketing neuroeconomics and so forth The use of neuro scientific technologies in particular fMRI has indeed led to a bewildering and somewhat suffocating proliferation of new approaches however the speed of such developments demands that we must proceed carefully with such ventures or risk some fundamental mistakes The book that you now hold will consolidate these new neuroscience based approaches and in doing so highlight the importance of this approach in helping us to understand human social behavior in general Taken together the chapters provide a framework for scholars within the neurosciences who wish to explore the further the opportunities that the study of organisational behavior may provide **Social Psychology Australian & New Zealand Edition** Saul Kassin, Steven Fein, Hazel Rose Markus, Kerry Anne McBain, Lisa Williams, 2019-08-01 Using a balanced approach Social Psychology 2e connects social psychology theories research methods and basic findings to real world applications with a current events emphasis Coverage of culture and diversity is integrated into every chapter in addition to strong representation throughout of regionally relevant topics such as Indigenous

Lets delve into the realm of bestselling books, exploring the captivating narratives that have charmed audiences this year. Nature Vs Nurture Psychology Paper : Colleen Hoover's "It Ends with Us" This heartfelt tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover skillfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can prevail. Nature Vs Nurture Psychology Paper : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This spellbinding historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's captivating storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Nature Vs Nurture Psychology Paper : Delia Owens' "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens crafts a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered. The novel begins with Richard Papan, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and gripping novel that will keep you guessing until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
