Ergonomics Michael Stein, Peter Sandl, 2012-03-28 The variety and increasing availability of hypermedia information systems which are used in stationary applications like operators consoles as well as mobile systems e.g. driver information and navigation systems in automobiles form a foundation for the mediatization of the society. From the human engineering point of view, this development and the ensuing increased importance of information systems for economic and private needs require careful deliberation of the derivation and application of ergonomics methods, particularly in the field of information systems. This book consists of two closely intertwined parts. The first theoretical part defines the concept of an information system, followed by an explanation of action regulation as well as cognitive theories to describe man-information-system interaction. A comprehensive description of information ergonomics concludes the theoretical approach. In the second, practically oriented part of this book, authors from industry as well as from academic institutes illustrate the variety of current information systems taken from different fields of transportation, i.e. aviation, automotive and railroad. The reader thus gains an overview of various applications and their context of use as well as similarities and differences in design. This does not only include a description of the different information systems but also places them in the context of the theories and models which were presented in the first part of this book.

A Philosophy of Technology Peter Vermaas, Peter Kroes, Ibo van de Poel, Maarten Franssen, Wybo Houkes, 2022-05-31 In *A Philosophy of Technology: From Technical Artefacts to Sociotechnical Systems*, technology is analysed from a series of different perspectives. The analysis starts by focussing on the most tangible products of technology called technical artefacts and then builds step-wise towards considering those artefacts within their context of use and ultimately as embedded in encompassing sociotechnical systems that also include humans as operators and social rules like legislation. Philosophical characterisations are given of technical artefacts, their context of use and of sociotechnical systems. Analyses are presented of how technical artefacts are designed in engineering and what types of technological knowledge is involved in engineering. And the issue is considered how engineers and others can or cannot influence the development of technology. These characterisations are complemented by ethical analyses of the moral status of technical artefacts and the possibilities and impossibilities for engineers to influence this status when designing artefacts and the sociotechnical systems in which artefacts are embedded. The running example in the book is aviation, where aeroplanes are examples of technical artefacts and the world aviation system is an example of a sociotechnical system. Issues related to the design of quiet aeroplane engines and the causes of aviation accidents are analysed for illustrating the moral status of designing and the role of engineers therein.

Table of Contents: Technical Artefacts, Technical Designing, Ethics and Designing, Technological Knowledge, Sociotechnical Systems, The Role of Social Factors in Technological Development, Ethics and Unintended Consequences of Technology.
