Integrative Toxicogenomics: Analytical Strategies to Amalgamate Exposure Effects with Genomic Sciences Pierre R. Bushel, Weida

Tong, 2019-04-09 Toxicogenomics combines the use of toxicology and genomic sciences to elucidate chemical toxic and environmental stressor effects on biological systems Integrative toxicogenomics requires innovation in bioinformatics statistics and systems toxicology and typically a combination of the utility of two or more of these disciplines to better understand molecular mechanisms involved in toxic responses This Frontiers in Toxicogenomics Research Topic eBook focuses on integrative toxicogenomics more so at the late stage analyzing each data set separately and then merging the results and brings together analyses that combine gene expression microarray TempO Seq or RNA Seq with other data biological assays clinical chemistry therapeutic categories or molecular pathways or highlights data analytics that leverage bioinformatics and statistics The eight articles illustrate the state of art in the field and the analysis of toxicogenomics data for a more comprehensive deduction of biological mechanisms and cellular functions associated with adverse outcomes from environmental exposures chemicals and toxicants However it is clear that the field of integrative toxicogenomics needs considerably more attention paid to it in order to develop other clever ways of integrating the data for analysis

Wong, Li Wen, Jon D. Piganelli, Sarah J. Richardson, E. Allison Green, Anne Cooke, 2022-03-28 *Gastrointestinal Damage and Metabolic Disorders* Daniele Maria-Ferreira, Marcelo Biondaro Gois, Elizabeth S. Fernandes, 2025-08-19 Gastrointestinal GI disorders can be described as physiologic and or morphologic changes in the GI system and include motility disorders changes in mucosal and immune function and alterations in the intestinal microbiota Inflammatory bowel diseases such as ulcerative colitis and Crohn s disease are the most serious disorders causing chronic inflammation while other chronic inflammatory diseases that cause severe damage include irritable bowel syndrome and gastroesophageal reflux The main causes of these diseases include genetic predisposition unhealthy lifestyles pharmacological therapies and infections Regardless of the specific disorder it is known to cause considerable discomfort and a reduced quality of life for those affected and there is increasing evidence that damage to the gastrointestinal tract can influence the development of

metabolic diseases For example impaired release of gut hormones responsible for signaling the feeling of satiety could be associated with the occurrence of obesity long term alterations in the composition of the gut microbiota may play a role in the development of metabolic diseases among others
