researchers and practicing engineers **Quantification of Building Seismic Performance Factors**, 2009 This report describes a recommended methodology for reliably quantifying building system performance and response parameters for use in seismic design The recommended methodology referred to herein as the Methodology provides a rational basis for establishing global seismic performance factors SPFs including the response modification coefficient R factor the system overstrength factor and deflection amplification factor Cd of new seismic force resisting systems proposed for inclusion in model building codes The purpose of this Methodology is to provide a rational basis for determining building seismic performance factors that when properly implemented in the seismic design process will result in equivalent safety against collapse in an earthquake comparable to the inherent safety against collapse intended by current seismic codes for buildings with different seismic force resisting systems *Infrastructure Systems for Nuclear Energy* Thomas T. C. Hsu, Chiun-lin Wu, Jui-Liang Lin, 2014-02-03 Developing sufficient energy resources to replace coal oil and gas is a globally critical necessity Alternatives to fossil fuels such as wind solar or geothermal energies are desirable but the usable quantities are limited and each has inherent deterrents The only virtually unlimited energy source is nuclear energy where safety of infrastructure systems is the paramount concern Infrastructure Systems for Nuclear Energy addresses the analysis and design of infrastructures associated with nuclear energy It provides an overview of the current and future nuclear power industry and the infrastructure systems from the perspectives of regulators operators practicing engineers and research academics This book also provides details on investigations of containment structures nuclear waste storage facilities and the applications of commercial academic computer software Specific environments that challenge the behavior of nuclear power plants infrastructure systems such as earthquake blast high temperature irradiation effects soil structure interaction effect etc are also discussed Key features Includes contributions from global experts representing academia and industry Provides an overview of the nuclear power industry and nuclear infrastructure systems Presents the state of the art as well as the future direction for nuclear civil infrastructure systems Infrastructure Systems for Nuclear Energy is a comprehensive up to date reference for researchers and practitioners working in this field and for graduate studies in civil and mechanical engineering

[FRP Reinforcement in RC Structures](#) fib Fédération internationale du béton,2007-01-01 fib Bulletin 40 deals mainly with the use of FRP bars as internal reinforcement for concrete structures The background of the main physical and mechanical properties of FRP reinforcing bars is presented with special emphasis on durability aspects For each of the typical ultimate and serviceability limit states the basic mechanical model is given followed by different design models according to existing codes or design guidelines Composite FRP materials are still relatively new in construction and most engineers are unfamiliar with their properties and characteristics The second chapter of this bulletin therefore aims to provide practising engineers with the necessary background knowledge in this field and also presents typical products currently available in the international market The third chapter deals with the issue of durability and identifies the parameters that can lead to deterioration which is necessary information when addressing design issues A series of parameters is used to identify the allowable stress in the FRP after exposure for a specified period of time in a specific environment The bulletin covers the issues of Ultimate Limit States primarily dealing with flexural design Serviceability Limit States dealing with deflections and

cracking Shear and Punching Shear and Bond and Tension Stiffening It provides not only the state of the art but also in many cases ideas for the next generation of design guidelines The final chapter deals with the fundamental issue of design philosophy The use of these new materials as concrete reinforcement has forced researchers to re think many of the fundamental principles used until now in RC design The bulletin ends with a discussion of a possible new framework for developing partial safety factors to ensure specific safety levels that will be flexible enough to cope with new materials
