Active Learning in College Science Joel J. Mintzes,Emily M. Walter,2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to

investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of na ve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for

Supervision in Action: A Relational Approach to Coaching and Consulting Supervision Erik de Haan, 2012-02-16 Supervision assures the quality of professional practice through careful monitoring; it heals wounds through wholesome listening and support and offers a unique and free space to develop that which we all want to progress our personal relationships. This book will help professional supervisors, consultants and coaches with the care for the self aspect of their role, the art of enhancing one's own performance with the help of experience in practice. The book features a compact overview of the whole profession of coaching and consulting supervision. An integrated approach for coaches and consultants highlighting differences. More than 40 real life case vignettes. Short summaries after each chapter. A full overview of types of contract and methodology with specific flowcharts. A detailed introduction to the ethics of supervision. Supervision in Action is a book for all professional consultants who want to take good care of themselves and who want to help other consultants and coaches with the care for the self. In reading this book I felt that I was going on a journey with Erik de Haan in his own discovery of the complexities and relevance of supervision to practice; he discusses very well the multiple levels of reflection that help supervisees move from rigidity to flexibility. All the chapters are interspersed with examples of the supervisory process which are geared to illustrate the points that he is making. Professor Maria Gilbert, Joint Head of the Integrative Department at Metanoia. The book is pragmatic and honest, offering rich vignettes to demonstrate application of both simple and complex concepts to the supervision process. De Haan explicitly recognises the complexity of working with people in organisations working with what is emerging and positions learning as an ongoing enquiry. Dr Alison Whybrow, i coach academy Ltd. The distinct contribution of de Haan's book to the coaching profession lies in the focus on the psychodynamic relationship in supervision. The detailed explanation and exploration of the phenomena of transference and parallel process through numerous case examples provides a rich source of learning and growth for both Supervisor and Supervisee. John Leary Joyce, CEO Academy of Executive Coaching, EMCC UK President. This excellent title which combines theory with practical case studies is recommended reading for those interested in supervision and reflective practice. Dr Jonathan Passmore, Independent Consultant. Galileo once said: 'You cannot teach people anything; You can only help them discover it within themselves.' Erik de Haan is unparalleled in helping coaches to become more effective in this discovery process in using themselves as an instrument. This book is invaluable for consultants and coaches who want to learn more from experience. Manfred Kets de Vries, Professor of Leadership Development, INSEAD, France. Drawing on his extensive experience as a practitioner, teacher and researcher, de Haan has created a book which will

not only benefit experienced supervisors but will also enhance the capacities of coaches OD consultants and consulting teams to self reflect and to gain optimum value from their supervision This book provides a welcome guide for more mindful and skilful supervision practice Hilary Lines Executive and Team Coach Independent Language Learning Bruce Morrison,2011-10-01 Louise Ho is a Chinese poet from Hong Kong who finds her feet in English Since her first publications more than thirty years ago her poetry collected here has been a reflection of the fortunes of the city and its people their hopes and anxieties their achievements crises dispersals and renewals Psychology in Action Active Learning Edition with Study Review Guide and Student Guide for Blackboard D Set Karen Huffman,2002-06-20 Handbook of Research on Active Learning and Student Engagement in Higher Education Keengwe, Jared,2022-06-10 Active learning occurs when a learning task can be related in a non arbitrary manner to what the learner already knows and when there is a personal recognition of the links between concepts The most important element of active learning is not so much in how information is presented but how new information is integrated into an existing knowledge base In order to successfully implement active learning into higher education its effect on student engagement must be studied and considered The Handbook of Research on Active Learning and Student Engagement in Higher Education focuses on assessing the effectiveness of active learning and constructivist teaching to promote student engagement and provides a wide range of strategies and frameworks to help educators and other practitioners examine the benefits challenges and opportunities for using active learning approaches to maximize student learning Covering topics such as online learning environments and engagement approaches this major reference work is ideal for academicians practitioners researchers librarians industry professionals educators and students
