Laboratory Guide to the Methods in Biochemical Genetics Nenad Blau,Frédéric M. Vaz,2024-11-01 Now in its 2nd edition this manual describes laboratory methodology for the diagnosis of inherited metabolic diseases The book describes a spectrum of tests from simple screening methods via classical methods that are operational in most if not all biochemical laboratories to analytical methods that depend on technologies that very few are currently employing in their labs but are certainly the functional techniques in a biochemical laboratory in this post genomics era Each chapter is sufficiently detailed to be self contained thus enabling laboratory specialists to adopt the method in their own laboratory and obviating the need for additional methods or references The second updated edition of the book is unique in that it is the first of its kind to be published in the last 13 years and individual chapters have been developed by experts in the field citing both established and cutting edge omics technology Thus it is an indispensable resource for researchers and clinicians working on the field of inherited metabolic diseases and those interested in laboratory diagnoses

 Xiang Pu, Naoki Kitaoka, Shilin Chen, Carlos E. Rodríguez-López, 2024-09-02 Plant secondary metabolites are a diverse group
 of compounds that contribute to many important biological and ecological functions They are synthesized by plants to
 interact with the biotic and abiotic environments playing roles in plant defense growth and development Additionally plant
 secondary metabolites have widespread applications in human industries including food additives cosmetics dyes insecticides
 and drugs The biosynthesis of these compounds is complex and dynamic with more than one million secondary metabolites
 identified from terrestrial and aquatic plants Despite their diversity plants produce limited quantities of secondary
 metabolites in a metabolic cost saving way This has greatly limited their commercial production and the overexploitation of
 source plants has raised concerns about their sustainability and highlighted the need for advanced research Recent advances
 in genomics transcriptomics metabolomics and other omics technologies have revolutionized our understanding of plant
 biology enabling the discovery of new plant secondary metabolites and their biosynthetic pathways Functional genomics
 approaches such as genome wide association studies transcriptome analysis and gene editing have facilitated the
 identification and characterization of genes and enzymes involved in the biosynthesis of specific secondary metabolites
 Metabolic engineering and synthetic biology approaches have enabled the manipulation of plant secondary metabolism to
 improve the yield and quality of specific metabolites of interest or to produce them in heterologous cultures These advances
 have created new opportunities for the sustainable production and utilization of plant secondary metabolites Metabolism

 worldwide due to anthropogenic activities and climate change Several cyanobacterial species are able to synthesize a high
 number of bioactive molecules among them cyanotoxins microcystins cylindrospermopsin nodularin etc which are considered
 a health concern For risk assessment of cyanotoxins more scientific knowledge is required to perform adequate hazard
 characterization exposure evaluation and finally risk characterization of these toxins This Special Issue Cyanobacteria and

Pain and Pain-Related Neuropsychiatric Disorders: From Mechanistic Insights to Innovative

Therapeutic Strategies Álvaro Llorente-Berzal, Francesca Guida, Fabio Turco, Rosmara Infantino, 2025-04-07 Chronic pain is an important personal and socio economic burden affecting more than 30% of people worldwide It is highly disabling and associated with long term affective and cognitive sequelae Despite synergistic advances in basic and clinical research some of the most severe conditions remain poorly managed shifting from nociceptive nature to neuropathic and nociplastic components and major neuropsychiatric complications Therefore the understanding of pathophysiological mechanisms and the discovery of new pharmacological targets and innovative approaches are strongly awaited Important advances in basic research focus on the mechanistic aspect offering no direct implication for novel therapeutic strategies Conversely the use of innovative therapies is not easily considered in clinical practice breaking the process of translation for therapy The primary goal of this Research Topic is to create a synergistic circularity of knowledge merging clinical challenges with the latest pathophysiological findings in the field of pain and related neuropsychiatric disorders with implications for pharmacological innovation In addition with a view to sustainability particular attention will be given to compounds of natural origin from new cannabinoids alkaloids and capsaicinoids to tannins flavonoids and other substances or approaches American
