Applied Time Series Econometrics Helmut Lütkepohl, Markus Krätzig, 2004-08-02 Time series econometrics is a rapidly evolving field. Particularly the cointegration revolution has had a substantial impact on applied analysis. Hence no textbook has managed to cover the full range of methods in current use and explain how to proceed in applied domains. This gap in the literature motivates the present volume. The methods are sketched out reminding the reader of the ideas underlying them and giving sufficient background for empirical work. The treatment can also be used as a textbook for a course on applied time series econometrics. Topics include unit root and cointegration analysis, structural vector autoregressions, conditional heteroskedasticity and nonlinear and nonparametric time series models. Crucial to empirical work is the software that is available for analysis. New methodology is typically only gradually incorporated into existing software packages. Therefore a flexible Java interface has been created allowing readers to replicate the applications and conduct their own analyses.

Three Essays in Applied Time Series Econometrics Taylor Collins, 2017 This dissertation is composed of four chapters Chapter 1 provides an introduction to the paper by highlighting some of the key economic questions econometric methods and conclusions that this paper chronicles In Chapter 2 I conduct a range of unit root tests on the unemployment rates of 30 OECD countries The objective of these tests are to use modern data and methods to update an old line of research that endeavors to uncover the most appropriate way to model unemployment I find less evidence supporting Structural theories of unemployment than have prior studies in this field In Chapter 3 I turn my attention to US monetary policy Specifically I utilize a new estimation technique called the Beverage Nelson Filter to construct output gaps for use in an introductory Taylor Rule study I revisit a marquee paper from John Taylor conduct a structural change test of Bai and Perron and utilize a wide modeling of monetary policy rules I find that the Federal Funds Rate displayed as strong an adherence to baseline Taylor Rules through the 1960s as in any other era Chapter 4 then turns the focus to New Zealand monetary policy and their role as the world s first inflation targeting country In this chapter I study

the effects of the inflation rate and its forecasted value for the following two years on New Zealand's Official Cash Rate and the country's Industrial Production Index Using a set of Threshold Regressions and VAR Regressions I find that New Zealand's interest rate responds much more strongly to the medium run projected inflation than it does to inflation that is realized or projected to occur in the short run I also find evidence that production in New Zealand is more responsive to changes in projected inflation than to changes in the interest rate

Introduction to Modern Time Series

Analysis Gebhard Kirchgässner, Jürgen Wolters, Uwe Hassler, 2012-10-08 This book presents modern developments in time series econometrics that are applied to macroeconomic and financial time series bridging the gap between methods and realistic applications It presents the most important approaches to the analysis of time series which may be stationary or

nonstationary Modelling and forecasting univariate time series is the starting point For multiple stationary time series Granger causality tests and vector autoregressive models are presented As the modelling of nonstationary uni or multivariate time series is most important for real applied work unit root and cointegration analysis as well as vector error correction models are a central topic Tools for analysing nonstationary data are then transferred to the panel framework Modelling the multivariate volatility of financial time series with autoregressive conditional heteroskedastic models is also treated
