reaping real commercial rewards Because of the relatively low cost of entering the app market smaller enterprises can level the playing field often outstripping their larger competitors simply because they have developed and marketed an app that delivers a service that their consumers are looking for This book isn't about how apps can help you run your business more efficiently or an in depth tutorial about how to create an app for your enterprise Instead it provides a unique introduction and overview of the possibilities for any small or growing business It's a focused guide about the business of apps for those whose time is money Connecting with customers over their mobile phones and tablets allows a more intimate and ultimately more lucrative link between businesses and consumers to be established With this latest book in the popular Business Bites series you can help your business take the first steps into an exciting and growing marketplace Mobile Security Products for Android Philipp Kratzer, Christoph Gruber, Andreas Clementi, David Lahee, Philippe Rödlach, Peter Stelzhammer, 2014-10-14 We have once again tested security products for smartphones running Google's Android operating system Our report covers details of the products made by leading manufacturers Smartphones represent the future of modern communications In 2013 more than 1 billion smartphones were sold a further milestone in the advance of these devices¹ A study published by Facebook emphasises the importance of smartphones in our lives about 80% of users make use of their smartphone within 15 minutes of waking up each day At the same time the traditional function of a telephone is becoming less and less important The high quality of integrated cameras means that the smartphone is increasingly used for photography As well as with photos users trust their devices with their most personal communications such as Facebook WhatsApp and email This brings some risks with it as such usage makes the smartphone interesting for criminals who attempt to infect the device with malware or steal personal data There is also the danger brought by phishing attacks These days the use of security software on a PC or laptop is seen as essential However many smartphone users do not yet have the same sense of responsibility even though their devices store personal data private photos Internet banking information or even company data As modern smartphones are often expensive to buy they are also an attractive target for thieves Top quality smartphones cost several hundred Euros As it is not possible to physically prevent them from being stolen they must be made less attractive to thieves Consequently many of today's security products contain not only malware protection but also highly developed theft protection functions which make the device less attractive to thieves e.g. by locking the device and help the owner to find it again *High Performance Android Apps* Doug Sillars, 2015-09-09 Annotation In a virtual sea of Android apps the key to survival in the form of user engagement referrals and purchases is simple performance and perceived speed But building a high performance app isn't easy in a fast paced and rapidly changing environment where new devices platforms and development tools are announced almost daily This practical guide provides tools and tips that will help you take app performance to a new level The Rough Guide to Android Phones Andrew Clare, 2010-12-01 The Rough Guide to Android Phones is the ultimate guide for Android phone users Showing you all the tips and tricks that ensure your phone performs to
