## **American And British Aircraft Carrier Development 1919 1941:**

**American and British Aircraft Carrier Development, 1919-1941** Thomas Hone, Norman Friedman, Mark David Mandeles, 1999 Focusing on the critical years between the two world wars the authors trace the personal organizational and institutional elements that moved the U S and British navies along different paths of aircraft carrier development and operations In a direct almost conversational tone they draw on years of research to explain why and how the Royal Navy lost its once considerable lead in carrier doctrine and carrier aircraft development to the Americans d Innovation in Carrier Aviation U. S. Military, Department of Defense (DoD), U. S. Navy, U. S. Government, 2017-05-07 This exceptional book examines the watershed period in carrier development that occurred immediately following World War II when design advances were made that would be crucial to the centrality in national security policy making that carriers and naval aviation have today In those years several major technological breakthroughs notably the jet engine and nuclear weapons raised large questions about the future and led to an array of innovations in the design and operational utilization of aircraft carriers Central to this story is the collaboration between the aviation communities in the navies of the United States and Great Britain during these years building on the intimate relationship they had developed during the war itself Strikingly the most important of these innovations notably the angled flight deck and steam catapult originated with the British not the Americans This study thereby also provides interesting lessons for the U S Navy today with respect to its commitment to maritime security cooperation in the context of its new maritime strategy It is a welcome and important addition to the historiography of the Navy in the seminal years of the Cold War CHAPTER ONE BuAer before World War II CHAPTER TWO BuAer in World War II CHAPTER THREE The Potential of the Big Bomber CHAPTER FOUR Royal Navy Wartime Experience and Analysis CHAPTER FIVE Adopting Jet Engines CHAPTER SIX British and American Prospects after the War CHAPTER SEVEN The Flexdeck CHAPTER EIGHT Catapults Choosing an Option under Pressure CHAPTER NINE Analysis The study on which this monograph is based was commissioned by the Office of the Secretary of Defense Net Assessment in the fall of 2006 as part of that office s longstanding support for studies of military innovation In some sense the OSD NA project was a follow on to an earlier study by the present coauthors published in 1999 as American British Aircraft Carrier Development 1919 1941 by the Naval Institute Press In the mid 1980s Andrew Marshall the director of the Office of Net Assessment in the Office of the Secretary of Defense encouraged a number of investigators to examine cases of innovation in the U S armed forces and in the armed forces of other countries His encouragement coupled with the financial support of his office led to a number of studies among which was the book American British Aircraft Carrier Development 1919 1941 Annapolis Md Naval Institute Press 1999 written by the authors of the study that you are about to read The success of American British Aircraft Carrier Development 1919 1941 led Mr Marshall to ask whether we might examine the development of the modern aircraft carrier after World War II We already knew that the three essential innovations the steam catapult the angled flight deck and

the optical landing aid had been developed first in Great Britain for and by the Royal Navy Then all three innovations had been picked up by the U S Navy But why Mr Marshall wanted to know had the Royal Navy developed these innovations first He asked us to come together and answer that question as well as the related question of how these innovations were transferred so quickly to the U S Navy Mr Marshall s interest was in the process of innovation and in how innovations spread We have tried to find answers to his questions

**Warfare in the Western World, 1882-1975** Jeremy Black, 2014-12-18 In this companion volume to *Western Warfare 1775-1882* Jeremy Black takes his analysis of modern warfare into the twentieth century As before a distinctive feature of the author s approach is the coverage of both land and naval warfare as well as conflict within the West and between Western and non Western powers Beginning with the British conquest of Egypt in 1882 this book goes on to examine the Spanish American War of 1898 the Boer War and the Balkan conflicts leading to world war in 1914 A revisionist account of the First World War is followed by a discussion of Western expansionism in the period to 1936 Chapters on the interwar years and the Second World War lead on to a discussion of the retreat from empire and the advent of Cold War The narrative closes with the end of the Vietnam War in 1975 and a discussion of the limitations of Western military technique doctrine and technology Throughout the themes of military change and modernization are brought into sharp focus and the revolutionary characteristics of the machination of war in this period are questioned Jeremy Black offers a new and challenging interpretation of modern warfare that will be required reading not only for students of military history but for all those interested in the impact of war in the making of the modern world

**The British Seaborne Empire** Jeremy Black, Professor Jeremy Black, 2004-01-01 Britain s seaborne tradition is used to throw light on the British themselves the people with whom they came into contact and the British perception of empire The oceans and their shores rather than the mysterious interiors of continents certainly dominated the English perception of the transoceanic world in the sixteenth seventeenth and eighteenth centuries climaxing in the fascination with the Pacific in the age of Captain Cook and continuing into the nineteenth century with Franklin in the Arctic and Ross in the Antarctic The oceans offered much more than fascination In England from the late sixteenth century maritime conflict and imperial strength were seen as important to national morale and reputation and without it there would have been no empire or at least not in the form it actually took

**BOOK JACKET American Civil-Military Relations** Suzanne C. Nielsen, Don M. Snider, 2009-10-05 *American Civil Military Relations* offers the first comprehensive assessment of the subject since the publication of Samuel P Huntington s *The Soldier and the State* Using this seminal work as a point of departure experts in the fields of political science history and sociology ask what has been learned and what more needs to be investigated in the relationship between civilian and military sectors in the 21st century Leading scholars such as Richard Betts Risa Brooks James Burk Michael Desch Peter Feaver Richard Kohn Williamson Murray and David Segal discuss key issues including changes in officer education since the end of the Cold War shifting conceptions of military expertise in response to evolving operational and

strategic requirements increased military involvement in high level politics the domestic and international contexts of U S civil military relations The first section of the book provides contrasting perspectives of American civil military relations within the last five decades The next section addresses Huntington s conception of societal and functional imperatives and their influence on the civil military relationship Following sections examine relationships between military and civilian leaders and describe the norms and practices that should guide those interactions What is clear from the essays in this volume is that the line between civil and military expertise and responsibility is not that sharply drawn and perhaps given the increasing complexity of international security issues it should not be When forming national security policy the editors conclude civilian and military leaders need to maintain a respectful and engaged dialogue Essential reading for those interested in civil military relations U S politics and national security policy *Joint Force Quarterly*, 1999 Joint Force Quarterly is published for the Chairman Joint Chiefs of Staff by the Institute for National Strategic Studies National Defense University to promote understanding of the integrated employment of land sea air space and special operations forces The journal focuses on joint doctrine coalition warfare contingency planning combat operations conducted by the unified commands and joint force development *Aircraft Carriers* Norman Polmar, 2008-01-01 In the post 1945 era the aircraft carrier has remained a valued weapon despite the development of nuclear weapons cruise and ballistic missiles and highly capable submarines At times as in the early days of the Korean and Vietnam Wars and in the Falklands conflict carriers alone could deploy high performance aircraft to the battlefield In other operations such as enforcing the no fly zones and the U S invasions of Afghanistan and Iraq only carriers could provide the bases needed for sustained combat and support operations This second volume of Norman Polmar s landmark study details the role of carriers in the unification of the U S armed forces and strategic deterrence fiscally constrained Great Britain the development of British Commonwealth and ex colonial navies and the efforts of France and the Netherlands to rebuild their fleets The role of the modern carrier nine nations currently possess them is discussed as are the issues confronting nations that might acquire them Chapters on the Soviet Union s effort to produce carriers are included for the first time The development of both carrier planes and the many oddball aircraft that have flown from carriers such as the U 2 spy plane are also examined Appendixes include comprehensive data on all carriers built and converted through 2006 This volume is a valuable companion to the critically acclaimed Volume I which covers aircraft carrier development and operations from 1909 to 1945 *The Royal Navy, 1930-2000* Richard Harding, 2005 This book explores innovation within the Royal Navy from the financial constraints of the 1930s through to the refocusing of the Royal Navy after 1990 **The Fog of Peace and War Planning** Talbot C. Imlay, Monica Duffy Toft, 2007-01-24 How do we plan under conditions of uncertainty The perspective of military planners is a key organizing framework do they see themselves as preparing to administer a peace or preparing to fight a future war Most interwar volumes examine only the 1920s and the 1930s This new volume goes back and forward in time to draw on a greater expanse of history in order to

tease out lessons for contemporary planners These chapters are grouped into four periods 1815 1856 1871 1914 1918 1938 and post Second World War They progress from low tech to high tech concerns for example the first period examines armies while the second period examines navies the third assesses navies combined with air forces and finally for the Kaiser chapter explores nuclear issues and decision making The Royal Navy 1930-1990 Richard Harding,2004-11-25 This new book explores innovation within the Royal Navy from the financial constraints of the 1930s to World War Two the Cold War and the refocusing of the Royal Navy after 1990 Successful adaptation to new conditions has been critical to all navies at all times

*The Dynamics of Military Revolution, 1300-2050* MacGregor Knox,Williamson Murray,2001-08-27 The Dynamics of Military Revolution aims to bridge a major gap in the emerging literature on revolutions in military affairs suggesting that there have been two very different phenomena at work over the past centuries military revolutions which are driven by vast social and political changes and revolutions in military affairs which military institutions have directed although usually with great difficulty and ambiguous results By providing both a conceptual framework and a historical context for thinking about revolutionary changes in military affairs the work establishes a baseline for understanding the patterns of change innovation and adaptation that have marked war in the Western World since the thirteenth century beginning with Edward III s revolutionary changes in medieval warfare through the development of modern Western military institutions in seventeenth century France to the cataclysmic changes of the First World War and the German Blitzkrieg victories of 1940 This history provides a guide for thinking about military revolutions in the coming century which are as inevitable as they are difficult to predict **The Culture of Military Organizations** Peter R. Mansoor,Williamson Murray,2019-10-17 Examines how military culture forms and changes as well as its impact on the effectiveness of military organizations *Military Adaptation in War* Williamson Murray,2011-10-10 Addresses how military organizations confront the problem of adapting under the trying terrifying conditions of war **The Future of War** Mark Mandeles,2014-05-27 Many analysts have heralded the U S military s Revolution in Military Affairs RMA a qualitative improvement in operational concepts and weapons that transforms the nature and character of warfare Focusing on military technology most argue that the new sensor surveillance communications and computational technologies will usher in a period in which U S military capabilities will far exceed those of potential competitors Developments in such fields as nanotechnology robotics and genetic engineering will greatly influence new weapons designs of the twenty first century These discussions about military revolutions however too often ignore or only pay lip service to the role of military organization in improving combat capability They downplay the relationship between organizational structure and outcomes the difficulties of coordinating large organizations composed of many people and offices having specialized roles and the challenges of calculation attention and memory that face individuals making decisions with inadequate or ambiguous information under short deadlines or stressful situations Mark D Mandeles argues that the key to future combat effectiveness is not in acquiring new technologies but rather in the Defense Department

s institutional and organizational structure and its effect upon incentives to invent to innovate and to conduct operations effectively Doing so requires the military establishment to resist incentives to substitute short term technological gains for long term operational advantages and to maintain incentives for effective long term innovation [Army Transformation: A View from the U.S. Army War College](#) , **US Aviation and Aerospace Industry Handbook Volume 2 Military Equipment and Developments** IBP, Inc,2013-08 2011 Updated Reprint Updated Annually US Aviation and Aerospace Industry Handbook Volume 1 BASIC TRENDS AND REGULATIONS *The Military Revolution and Revolutions in Military Affairs* Mark Fissel,2022-12-05 The Military Revolution and Revolutions in Military Affairs updates two central debates in military history the one surrounding the concept of military revolution and the one on military affairs whilst advancing original research in both fields Only a handful of publications consider the military revolution and the RMA in tandem This book breaks new ground conceptually and appeals to an exceptionally large and diverse readership Comparative revisionist studies of the military revolution and RMA better enable us to comprehend the historical continuum and reveal the new RMA for what it is And for what it is shortly to become This book presents original contributions within the epicentre of the military revolution debate the 1500s with an emphasis on gunpowder revolution offensively and defensively The connections with the Revolution in Military Affairs are then made explicit by scholars a practitioner and an analyst with an emphasis on airborne lethal autonomous weapons systems This is a chronologically broad and unique methodological approach to a historical debate that begs for clarification as we enter an era where killer robots will almost certainly take from humans their monopoly on violence **Storming the City** Alec Wahlman,2015-10-15 In an increasingly urbanized world urban terrain has become a greater factor in military operations Simultaneously advances in military technology have given military forces sharply increased capabilities The conflict comes from how urban terrain can negate or degrade many of those increased capabilities What happens when advanced weapons are used in a close range urban fight with an abundance of cover Storming the City explores these issues by analyzing the performance of the US Army and US Marine Corps in urban combat in four major urban battles of the mid twentieth century Aachen 1944 Manila 1945 Seoul 1950 and Hue 1968 Alec Wahlman assesses each battle using a similar framework of capability categories and separate chapters address urban warfare in American military thought In the four battles across a wide range of conditions American forces were ultimately successful in capturing each city because of two factors transferable competence and battlefield adaptation The preparations US forces made for warfare writ large proved generally applicable to urban warfare Battlefield adaptation a strong suit of American forces filled in where those overall preparations for combat needed fine tuning From World War Two to Vietnam however there was a gradual reduction in tactical performance in the four battles *To Train The Fleet For War: The U.S. Navy Fleet Problems, 1923-1940* Albert A. Nofi,2010-12-20 Product Description To Train the Fleet for War The U S Navy Fleet Problems 1923 1940 by Professor Albert A Nofi examines in detail making extensive use of the Naval War College

archives each of the U S Navy s twenty one fleet problems conducted between World Wars I and II elucidating the patterns that emerged finding a range of enduring lessons and suggesting their applicability of for future naval warfare      **The Diffusion of Military Power** Michael C. Horowitz,2010-07-01 The Diffusion of Military Power examines how the financial and organizational challenges of adopting new methods of fighting wars can influence the international balance of power Michael Horowitz argues that a state or actor wishing to adopt a military innovation must possess both the financial resources to buy or build the technology and the internal organizational capacity to accommodate any necessary changes in recruiting training or operations How countries react to new innovations and to other actors that do or don t adopt them has profound implications for the global order and the likelihood of war Horowitz looks at some of the most important military innovations throughout history including the advent of the all big gun steel battleship the development of aircraft carriers and nuclear weapons and the use of suicide terror by nonstate actors He shows how expensive innovations can favor wealthier more powerful countries but also how those same states often stumble when facing organizationally complicated innovations Innovations requiring major upheavals in doctrine and organization can disadvantage the wealthiest states due to their bureaucratic inflexibility and weight the balance of power toward smaller and more nimble actors making conflict more likely This book provides vital insights into military innovations and their impact on U S foreign policy warfare and the distribution of power in the international system
