REVIEW SHEET: TEST #1

Readings: Chapters 1, 2 and 3 in Lutgens and Tarbuck

Homeworks #1 and #2

- **Meteorology** is the scientific study of the atmosphere and the phenomena that we usually refer to as weather.
- **Weather** refers to the state of the atmosphere at a given time and place.
- **Climate** is a description of aggregate weather conditions; the sum of all statistical weather information that helps describe a place or region.

1) An Introduction to some Meteorological "Products"

a) Meteorological Satellites.... Visible, Infrared, and Water Vapor Images.

- Satellites have been used since the 1960s
- **Geostationary Satellite** - 22,300 miles above the Earth... stay over the same position
 - It can tell us where lighting is occurring
- **Polar Orbiting Satellites** - 517 miles above the Earth... 14 "passes" per day: more detailed picture but a smaller area seen
- **Visible Satellite Image** - similar to taking picture of the Earth with your cell phone, visible images are useless at night
- **Infrared Satellite Image** - you are "seeing" the temperature of the cloud tops or of the Earth's surface, this sensor can be used night and day (green = cold temps; gray = warm temps; cloud tops usually colder than surface), "warm/cold" colors do not apply
- **Water Vapor Satellite** - You see the amount of water vapor present in the atmosphere (dark shades = moist areas; light shades = dry areas) often used to see atmospheric movement
 - Visible graph is good when the chart is light
 - Use infrared whenever even if it is dark

b) Doppler Radar.
