Transition to Asynchronous Transfer Mode (ATM) an Implementation Model for NPS Software Metrics Lab Cameron P. Carney,Tony L.

Ellis,1999-03-01 With Asynchronous Transfer Mode ATM we are experiencing the emergence of a network technology that has the potential of satisfying the requirement for a worldwide standard to allow interoperability of information regardless of the hosts or type of information Historically ATM has been advertised as a Wide Area Network WAN technology Recently we have seen ATM take on more applications in the local area environment competing with the standard LAN technology Ethernet With its ability to accommodate the simultaneous transmission of data voice and video ATM could potentially create a seamless network based on one standard As a switched based technology some of the benefits provided by ATM are dedicated bandwidth per connection higher aggregate bandwidth flexible access speeds reduced network bandwidth cost reduced network access costs reduced equipment cost and commitment and improved management and flexibility We provide a discussion of the ATM standard an evaluation of the SML's LAN architecture and propose three ATM implementation models using the SML that NPS could employ to provide ITM students with practical experience and exposure to this technology Each model outlines the specifications i.e hardware and software required for implementation

Data Communications and Networking Global Edition 5e Behrouz A. Forouzan,2012-05-16 The fifth edition of Behrouz Forouzan's Data Communications and Networking presents a comprehensive and accessible approach to data communications and networking that has made this book a favorite with students and professionals alike More than 830 figures and 150 tables accompany the text and provide a visual and intuitive opportunity for understanding the material This unique approach minimizes the need for heavy math content allowing normally complicated topics to unfold graphically and visually rather than through the presentation of complex formulas The global edition has been developed specifically to meet the needs of international computer networks students In addition to a chapter on the peer to peer paradigm a full chapter on quality of service QoS generous coverage of forward error correction coverage of WiMAX and material on socket interface programming in Java we have added new international end of chapter questions and problems to make the content more relevant and improve learning outcomes for the international student
