Behavior of Marine Animals Joanna Burger, Bori L. Olla, Howard E. Winn, 2013-11-21 The majority of the chapters in this volume are structured to include a balance between literature review original data and synthesis The research approaches taken by the authors are generally of two kinds One centers on the long term in depth study of a single species in which many aspects of its natural history are examined in detail The other is a comparative one which involves investigating particular questions by examining species or by comparing groups of species that may include taxonomic and/or ecological affinities Most of the chapters concern obvious aspects of breeding behavior including habitat selection the effects of age on breeding communication mating systems synchrony of breeding activities development of behavior pre fledging parental care and post fledging parental care Of these topics many relate directly to the advantages and disadvantages of coloniality a conspicuous behavior pattern in marine birds As such they provide a picture for the further study of coloniality and the social behavior of many other animals Other important areas of marine bird breeding behavior such as courtship behavior antipredator behavior information transfer have not been included because of space limitations Since man's encroachment on the seashore and continental shelf poses certain threats to marine birds a volume elucidating various aspects of their biology has multiple uses As well as being of value to ornithologists the volume should be useful to managers involved with coastal planning

Behavior of Marine Animals

Howard E. Winn, Bori L. Olla, Joanna Burger, 1972 **Biology of Marine Birds** E. A. Schreiber, Joanna Burger, 2001-08-16

Biology of Marine Birds provides the only complete summary of information about marine birds ever published. It analyzes their breeding biology, ecology, taxonomy, evolution, fossil history, physiology, energetics, and conservation. The book covers four orders of marine birds in detail and includes two summary chapters that address the biology of shorebirds and wading birds and their lives in the marine environment. Summary tables give detailed information on various aspects of their life histories: breeding biology, physiology and energetics, and demography. It provides a guide to ornithologists and students for research projects.

What have been brought together in these volumes are works representing a variety of modern quantitative studies on a select group of marine organisms. Some of the species studied here represent basic biological experimental subjects in some cases marine versions of the white rat and pigeon that are being used for a wide range of studies. Other species studied were virtually unknown as experimental animals. The authors have studied their animals in considerable depth, often in both the field and the laboratory. It is this cross-reference between real life and the artificial but controlled conditions of the laboratory which gives us the necessary understanding and ultimately the means for improving our rapidly deteriorating environment, a must for man's survival, maintenance, and improvement of the quality of living standards.

A direct outgrowth of a AAAS symposium entitled Recent Advances in the Behavior of Marine Organisms held in December 1966, these volumes include a reasonable balance between review and original unpublished research. Of the many persons who have made these volumes possible, we wish to especially thank Nancy Fish, Lois Winn, Mabel Trafford, and Deborah Brennan. The latter two accomplished most of the final editorial work. The personnel of Plenum Press were cooperative in all aspects of our relationship. Only the two editors are responsible for defects in the volumes. We believe the papers presented are significant and will be of importance to members of the scientific community.

Behavior of Marine Animals Howard E. Winn, 1979 *Wildlife Review*, 1986 **Coloniality in the Cliff Swallow** Charles R. Brown, Mary Bomberger Brown, 1996-07

Many animal species live and breed in colonies. Although biologists have documented numerous costs and benefits of group living, such as increased competition for limited resources and more pairs of eyes to watch for predators, they often still do not agree on why coloniality evolved in the first place. Drawing on their twelve-year study of a population of cliff swallows in Nebraska, the Browns investigate twenty-six social and ecological costs and benefits of coloniality, many never before addressed in a systematic way for any species. They explore how these costs and benefits are reflected in reproductive success and survivorship and speculate on the evolution of cliff swallow coloniality. This work, the most comprehensive and detailed study of vertebrate coloniality to date, will be of interest to all who study social animals, including behavioral ecologists, population biologists, ornithologists, and parasitologists. Its focus on the evolution of coloniality will also appeal to evolutionary biologists and to psychologists studying decision making in animals.

Interest

in oceanography and marine biology and its relevance to global environmental issues continues to increase creating a demand for authoritative reviews that summarize recent research Oceanography and Marine Biology An Annual Review has catered to this demand since its foundation by the late Harold Barnes more than 40 years ago It is an *Vocal Communication in Birds and Mammals* Marc Naguib,Vincent Janik,Nicola Clayton,Klaus Zuberbuhler,2009-08-06 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This thematic volume Vocal Communication in Birds and Mammals makes another important contribution to the development of the field by presenting theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields *Flexibility in the Migration Strategies of Animals* Nathan R. Bowles,1994 Hearing and Sound Communication in Fishes W.N. Tavolga,A.N. Popper,R.R. Fay,2012-12-06 This volume is a compilation of the papers presented at a meeting that took place in April 1980 at the Mote Marine Laboratory Sarasota Florida The meeting and this volume are outgrowths of two earlier international meetings on marine bio acoustics that occurred in 1963 and 1966 Tavolga 1964 1967 The first meeting took place at the Lerner Marine Laboratory of the American Museum of Natural History while the second meeting was at the American Museum itself and was under the sponsorship of the Department of Animal Behavior It is apparent that these two volumes have had immense impact on the current study of marine bio acoustics and particularly on fish audition In a preliminary conference in Sarasota in 1979 we decided that it was time for another such meeting to bring together as many as possible of the investigators interested in fish acoustics in order to assess the current state of our knowledge and predict directions for research for the next several years Such a meeting appeared particularly timely since over the past four or five years there have been many new studies that have provided new empirical and theoretical work on basic mechanisms of fish audition Furthermore it became evident as we made up preliminary lists of possible participants that few of the currently active workers were in the field back in 1966 In fact of the current participants only Drs Acoustic Communication in Birds Kroodsma,2012-12-02 Acoustic Communication in Birds Volume 1 Production Perception and Design Features of Sounds presents the scientific study of bird vocalizations This book discusses the relations between the physical structure of bird vocalization and their quality as perceived by the recipient Organized into nine chapters this volume begins with an overview of the first sound recording of bird sound This text then outlines some of the complex processes and events between sound production and behavior response to sound Other chapters consider the study of neural control of vocalizations in birds This

book discusses as well the acoustic information transmitted through the wide range of habitats plays a crucial role in different avian behaviors including individual and species recognition territorial defense mate selection and song learning The final chapter deals with a more detailed functional interpretation of a particular sound This book is a valuable resource for ornithologists ethologists and research workers Boletin de Ciencias Marinas ,1986 **Mate Choice** Paul Patrick Gordon Bateson,1983-04-28 Twenty one specially commissioned articles provide a clear picture of the current state of thinking about mate choice Brings together modern thinking on the various functions of mate choice and its role in evolution
