

Impact of same-day appointments on patient satisfaction with general practice appointment systems

Fiona Sampson, Mark Pickin, Alicia O'Gathain, Stephen Goodall and Chris Salisbury

ABSTRACT

Following recent concerns about patients' inability to book appointments in advance, this study examined the relationship between the proportion of GP appointments reserved for same-day booking, and patient satisfaction with appointment systems. In a survey of 12 825 patients in 47 practices, it was found that a 10% increase in the proportion of same-day appointments was associated with an 8% reduction in the proportion of patients satisfied. Practices should be wary of increasing the level of same-day appointments to meet access targets.

INTRODUCTION

Recent policy initiatives related to government targets for primary care access in *The NHS Plan*,¹ such as *Advanced Access*,² have led to changes in the numbers of appointments that are reserved for patients booking on the day (same-day appointments).³ This has led to high-profile criticisms that patients are less able to book appointments in advance,^{4,5} a particular concern for certain groups, such as older patients,⁶ and those with chronic conditions.^{7,8} There is also uncertainty about whether the success of these initiatives is related to the level of deprivation of the practice population.⁹ A recent evaluation of *Advanced Access* showed no difference in patient satisfaction with the appointment system between *Advanced Access* and control practices.⁹ However, there was considerable overlap between initiatives used by *Advanced Access* and control practices.⁹ Since difficulties in booking appointments in advance have been a focus of concern,¹ this study has examined the relationship between the proportion of GP appointments reserved for the same day and patient satisfaction with appointment systems, regardless of practices' *Advance Access* status.

METHOD

Data from the recent evaluation of *Advanced Access* were used, described in detail elsewhere.⁹ The data were a comparison of 48 general practices selected from 12 primary care trusts (PCTs) in England. The study made use of two components of this evaluation: a survey of practices and a survey of patients. The survey of practices undertaken in 2004 involved 391 practices from 12 PCTs purposefully selected to be representative of England.⁹ This provided data on the numbers of GP appointments offered in each practice, both bookable in advance and same-day only. The patient survey involved 12 825 adult patients attending 47 of the practices, undertaken in 2005.⁹ This provided data on patient satisfaction with the practice appointment system.

great majority of practicing doctors in England and Wales were general practitioners. They performed their own surgery and were accustomed to treating a wide variety of illnesses and symptoms. Specialists were few in number, tended to practice in large towns and were often associated with major hospitals. But rapidly changing medical institutions and services in the twentieth century have compelled specialization even among more modest doctors and hospitals. While medical specialization was not new for centuries, physicians were differentiated from surgeons. Twentieth century science and technology emphasized and accelerated this difference rapidly. Medical care began to shift from services rendered by the general practitioner to the employment of those doctors with a special interest, for example, pathology, neurology or cardiology.

Author Rosemary Stevens, an expert in public health, traces especially within the last two centuries the patterns of English medical practice, institutions, staffing and training, and their influence on specialization. The British National Health Service Act and post World War II developments. Stevens discusses the ever relevant issues of income determination, medical education and the future of the general practitioner in an age of specialization. Along with its companion volume, *Medical Practice in Modern England*, is a book that will be of lasting value to scholars of medicine, medical care, organization, economics and modern social history. It is of special importance at a time of crisis in the health care systems of many European countries. A fine book.

Carefully constructed, factual, elaborately researched, gracefully written. George A. Silver, M.D., professor emeritus of epidemiology and public health, Yale University. Rosemary Stevens is professor emerita of history and sociology of science at the University of Pennsylvania. Educated at Oxford, Yale and Manchester, she has also taught at Yale University and Tulane University. She is the author of *American Medicine and the Public Interest* and *In Sickness and in Wealth: American Hospitals in the Twentieth Century*.

Patient and Staff Voices in Primary Care Kenneth E. Collins, 2023-04-12. This unique work represents the recording and analysis of oral history interviews conducted by the pioneering general practitioner Dr Hetty Ockrim with over seventy patients, as well as office staff and members of the nursing team, between 1989 and 1992 in her former practice in the Ibrox/Govan areas of Glasgow, places of significant socio-economic deprivation. rather than just clinical issues The interviews are accompanied by background and commentary for the study reflecting the full breadth of general practice Many of the interviewees had memories stretching back before the NHS providing a unique historical perspective of service development as well as invaluable directions for improving current and future general practice Key Features Provides a historical context for the developments in health over several decades prior to the study Shows how oral history methods have increasingly been used in medical history research and explores the benefits of this approach Covers many of the themes of the oral history which enabled and encouraged patients to comment on what was important to them in their encounters with health care Follows the increasing acceptance of women in medicine demonstrating how women doctors were viewed by patients within the practice compared to changes in wider society Presents a history from below using voices that are not normally heard in the medical discourse illustrating the importance of the doctor patient interface Supporting a wider understanding of what patient narratives can tell us about the delivery of health care from the perspective of the patients the front line users of health services the book show how oral history can provide an understanding of health care more broadly key at a time when social inequality is once again widening in many regions

Disentitlement? Timothy Stoltzfus Jost,2003-04-10 No developed nation relies exclusively on the private sector to finance health care for citizens This book begins by exploring the deficiencies in private health insurance that account for this It then recounts the history and examines the legal character of America s public health care entitlements Medicare Medicaid and tax subsidies for employment related health benefits These programs are increasingly embattled attacked by those advocating privatization replacing public with private insurance individualization replacing group and community based insurance with approaches based on individual choice within markets and devolution devolving authority over entitlements to state governments and to private entities Jost critically analyzes this movement toward disentitlement He also examines the primary models for structuring health care entitlements in other countries general taxation funded national health insurance and social insurance and considers what we can learn from these models The book concludes by describing what an American entitlement based health care system could look like and in particular how the legal characteristics of our entitlement programs could be structured to support the long term sustainability of these vital programs
