Approaches To The Study Of International Relations:

Scientific Approaches to the Study of International Relations Jan-Henrik Petermann, 2011-11-21 Essay from the year 2006 in the subject Politics General and Theories of International Politics London School of Economics Department of International Relations language English abstract Since the behaviourist turn of the 1960s questions concerning the appropriateness and desirability of a positivist research agenda have been at the forefront of meta methodological debate within the social sciences The evolving science wars between positivists and normativists have also presented enormous challenges to the epistemological identities and professional self images of scholars working in the academic field of International Relations IR Whereas positivists maintain that the overarching aim of science is the experimentally guided explanation of empirical phenomena under covering laws normativists and traditionalists hold that social scientists cannot and in fact should not emulate the causal models of the natural sciences According to this view it is virtually impossible to study the influences of distinct variables in complex social interactions and statistical aggregation merely obscures the fact that the true causes of events are rarely obvious in the social world Hence the purpose of political and social research ought to be a desire to understand processes from within rather than to explain them from outside Yet the traditionalist critique of social scientific positivism did not imply that positivists would be entirely oblivious to the importance of norms in international life IR does not only deal with descriptive but with political and ultimately prescriptive aspects of the social world Thus it might appear worthwhile to ask how scientific are so called scientific positivist approaches to the study of IR if their theoretical premises and empirical achievements are taken at face value and judged by their own standards of scientific neutrality and precision To answer this question I will first describe the spread of positivist thought in IR Secondly I will outline in how far two research programmes which have been heavily influenced by positivist method game theory and the democratic peace thesis have challenged traditionalist approaches and whether they can be regarded as truly scientific Drawing on these insights I will conclude that on closer inspection positivist research methods in IR do lack a perfectly scientific status although they have made important contributions to the academic field *The Study of International Relations* Hugh C. Dyer, Leon Mangasarian, 1989-10-16 This wide ranging study surveys the present state of international relations as an academic field It locates and assesses recent developments in the field in short what is being done where by whom and why The editors have focused on some central and controversial theoretical issues and included surveys of principal sub fields as well as the various approaches to the study of international relations in different countries The book provides a comprehensive overview of an important and fast growing area of academic endeavour and is essential reading for teachers and students of international politics and the social sciences at large Approaches to the Study of International Relations Charles Boasson, 1968 *Theories and Approaches to International Politics* Patrick M.
